CALL and complexity – short papers from EUROCALL 2019 Fanny Meunier,Julie Van de Vyver,Linda Bradley,Sylvie Thouésny.2019-12-09 The theme selected for the 2019 EuroCALL conference held in Louvain-la-Neuve was 'CALL and complexity'. As languages are known to be intrinsically and linguistically complex, as are the many determinants of learning (additional) languages, complexity is viewed as a challenge to be embraced collectively. The 2019 conference allowed us to pay tribute to providers of CALL solutions and to recognize the complexity of their task. We hope you will enjoy reading this volume as it offers a rich glimpse into the numerous debates that took place during EuroCALL 2019. We look forward to continuing those debates and discussions with you at the next EuroCALL conferences!

Languages of Education Daniel Tröhler.2012-01-06 In this landmark contribution to the study of the formation of the modern school, Daniel Tröhler applies one of the most recognized methods of historical research to an analysis of the language of the academic discipline of education. Arguing the value of looking at languages rather than arguments--langues rather than paroles--this method of historical research is used to examine the background of different philosophies, theories, or arguments of education, specifically republicanism and Protestantism. Tröhler's argument is that such analysis is essential to tracing back educational arguments to the ideological core of their concerns, and thus to understanding in international perspective the historical development of education systems and organizations and to evaluating their different theoretical and political approaches and claims. Elegantly written, with the historian's attention to archival material, this book enables the reader to understand the complex and different social, cultural, religious, and political context factors embedded in the thought of schooling and its objects of scrutiny--its notions of the child and teacher. *Languages of Education* is essential reading for scholars and students across the fields of history and philosophy of education, curriculum studies, and comparative education.

Nootropics Scorpio Digital Press.2019-09-22 What exactly are nootropics? Nootropics are generally called smart drugs because they improve brainpower. but, more than 80 unique substances can fall under this broad category and they are wildly distinctive and generally useless. They include Adderall for ADHD, psychedelics, and even coffee. Do nootropics actually work? Choosing one as a complement is a muddy picture, however some nootropics DO work. most smart pills are stimulants -- short-acting chemicals that give you a boost in focus and attention for some hours. The nootropics that we have good evidence for, such as Adderall and Modafinil (sometimes used to help humans recover from a coma), are prescribed drugs. The smart drugs that aren't prescription-based or illegal have little or no proof suggesting they work. The substance must... Help the brain function under disruptive conditions, such as hypoxia (low oxygen) and electroconvulsive shock. Protect the brain from chemical and physical assaults, such as anti-cholinergic drugs and barbiturates. Increase the efficacy of neuronal firing control mechanisms in cortical and sub-cortical regions of the brain. Possess few or no side effects and be virtually non-toxic. Enhance memory and ability to learn. Research indicates getting omega-3s from fish is better than simply taking drugs, but if fish is simply too tough to get, put together, or eat, then the drugs are an awesome 2d alternative. Omega-3s are the real smart drugs in that you could not sense the results the day you consume them, however you may be in much better cognitive shape a few years from now than in case you had never added them in your diet. Conflict Management and Peacebuilding Volker Franke,Robert H. Dorff.2013 The authors examine the utility of the U.S. Government's whole-of-government (WoG) approach for responding to the challenging security demands of operations in Iraq and Afghanistan. They specifically discuss the strategic objectives of interagency cooperation particularly in the areas of peacebuilding and conflict management. Discussions range from the conceptual to the practical, with a focus on the challenges and desirability of interagency cooperation in international interventions. The book shares experiences and expertise on the need for and the future of an American grand strategy in an era characterized by increasingly complex security challenges and shrinking budgets. All authors agree that taking the status quo for granted is a major obstacle to developing a successful grand strategy and that government, military, international and nongovernmental organizations, and the private sector are all called upon to contribute their best talents and efforts to joint global peace and security activities. Included are viewpoints from academia, the military, government agencies, nongovernmental organizations, and industry. Despite the broad range of viewpoints, a number of overarching themes and tentative agreements emerged.

Decision Making in Action Gary A. Klein,Judith Orasanu,Roberta Calderwood.1992-08-01 This book describes the new perspective of naturalistic decision making. The point of departure is how people make decisions in complex, time-pressured, ambiguous, and changing environments. The purpose of this book is to present and elaborate on past models developed to explain this type of decision making. The central philosophy of the book is that classical decision theory has been unproductive since it is so heavily grounded in economics and mathematics. The contributors believe there is little to be learned from laboratory studies about how people actually handle difficult and interesting tasks; therefore, the book presents a critique of classical decision theory. The models of naturalistic decision making described by the contributors were derived to explain the behavior of firefighters, business people, jurors, nuclear power plant operators, and command-and-control officers. The models are unique in that they address the way people use experience to frame situations and adopt courses of action. The models explain the strengths of skilled decision makers. Naturalistic decision research requires the examination of field settings, and a section of the book covers methods for conducting meaningful research outside the laboratory. In addition, since his approach has applied value, the book covers issues of training and decision support systems.

Each chapter is replete with specific examples, templates to generate a first draft, and checklists or rubrics for self-evaluation. The final section of the book counsels graduate students and professors on selecting the most promising projects; generating multiple related, yet distinctive, publications from the same body of work; and using writing as a tool for professional development. Written by a team that represents outstanding teaching, award-winning writing, and extensive editorial experience, the book leads teacher/scholar/authors to replace the old "publish or perish" dictum with a different, growth-seeking orientation: publish and flourish.

Twenty Years of Education Transformation in Gauteng 1994 to 2014 Maringe, Felix,Prew, Martin.2015-05-05 Twenty Years of Education Transformation in Gauteng 1994 to 2014: An Independent Review presents a collection of 15 important essays on different aspects of education in Gauteng since the advent of democracy in 1994. These essays talk to what a provincial education department does and how and why it does these things - whether it be about policy, resourcing or implementing projects. Each essay is written by one or more specialist in the relevant focus area. The book is written to be accessible to the general reader as well as being informative and an essential resource for the specialist reader. It sheds light on aspects of how a provincial department operates and why and with what consequences certain decisions have been made in education over the last 20 turbulent years, both nationally and provincially. There has been no attempt to fit the book's chapters into a particular ideological or educational paradigm, and as a result the reader will find differing views on various aspects of the Gauteng Department of Education's present and past. We leave the reader to decide to what extent the GDE has fulfilled its educational mandate over the last 20 years.

Mind over Money Claudia Hammond.2016-11-01 The acclaimed author of *Time Warped* tackles the very latest research in the fields of neuroscience, psychology, and biology to provide a fresh, fascinating, and thought-provoking look at our relationship with money—perfect for fans of Dan Ariely and *Freakonomics*. We know we need money and we often want more of it, but we don't always think about the way it affects our minds and our emotions, skews our perceptions and even changes the way we behave. Award-winning BBC Radio 4 host Claudia Hammond delves into the surprising psychology of money to show us that our relationship with the stuff is more complex than we might think. Drawing on the latest research in psychology, neuroscience and behavioural economics, she draws an anatomy of the power it holds over us. She also reveals some simple and effective tricks that will help you use and save money better—from how being grumpy can stop you getting ripped off to why you should opt for the more expensive pain relief and why you should never offer to pay your friends for favours. An eye-opening and entertaining investigation into the power money holds over us, *Mind over Money* will change the way you view the cash in your wallet and the figures in your bank account forever. *Mind over Money* is an invaluable resource for anyone fascinated by the dynamics of money and for those wishing to learn how to maximize its power and greatest benefit.

Nuclear Education and Training OECD Nuclear Energy Agency.2012 The OECD Nuclear Energy Agency (NEA) first published in 2000 *Nuclear Education and Training: Cause for Concern?*, which highlighted significant issues in the availability of human resources for the nuclear industry. Ten years on, *Nuclear Education and Training: From Concern to Capability* considers what has changed in that time and finds that, while some countries have taken positive actions, in a number of others human resources could soon be facing serious challenges in coping with existing and potential new nuclear facilities. This is exacerbated by the increasing rate of retirement as the workforce ages. This report provides a qualitative characterisation of human resource needs and appraises instruments and programmes in nuclear education and training initiated by various stakeholders in different countries. In this context, it also examines the current and future uses of nuclear research facilities for education and training purposes. Regarding the nuclear training component of workforce competence, it outlines a job taxonomy which could be a basis for addressing the needs of workers across this sector. It presents the taxonomy as a way of enhancing mutual recognition and increasing consistency of education and training for both developed and developing countries.

Directorate S Steve Coll.2018-02-06 Winner of the 2018 National Book Critics Circle Award for Nonfiction Longlisted for the 2018 National Book Award for Nonfiction From the Pulitzer Prize-winning author of *Ghost Wars*, the epic and enthralling story of America's intelligence, military, and diplomatic efforts to defeat Al Qaeda and the Taliban in Afghanistan and Pakistan since 9/11 Prior to 9/11, the United States had been carrying out small-scale covert operations in Afghanistan, ostensibly in cooperation, although often in direct opposition, with I.S.I., the Pakistani intelligence agency. While the US was trying to quell extremists, a highly secretive and compartmentalized wing of I.S.I., known as Directorate S, was covertly training, arming, and seeking to legitimize the Taliban, in order to enlarge Pakistan's sphere of influence. After 9/11, when fifty-nine countries, led by the U. S., deployed troops or provided aid to Afghanistan in an effort to flush out the Taliban and Al Qaeda, the U.S. was set on an invisible slow-motion collision course with Pakistan. Today we know that the war in Afghanistan would falter badly because of military hubris at the highest levels of the Pentagon, the drain on resources and provocation in the Muslim world caused by the U.S.-led invasion of Iraq, and corruption. But more than anything, as Coll makes painfully clear, the war in Afghanistan was doomed because of the failure of the United States to apprehend the motivations and intentions of I.S.I.'s Directorate S. This was a swirling and shadowy struggle of historic proportions, which endured over a decade and across both the Bush and Obama administrations, involving multiple secret intelligence agencies, a litany of incongruous strategies and tactics, and dozens of players, including some of the most prominent military and political figures. A sprawling American tragedy, the war was an open clash of arms but also a covert melee of ideas, secrets, and subterranean violence. Coll excavates this grand battle, which took place away from the gaze of the American public. With unsurpassed expertise, original research, and attention to detail, he brings to life a narrative at once vast and intricate, local and global, propulsive and painstaking. This is the definitive explanation of how America came to be so badly ensnared in an elaborate, factional, and seemingly interminable conflict in South Asia. Nothing less than a forensic examination of the personal and political forces that shape world history, Directorate S is a complete masterpiece of both investigative and narrative journalism.

The Truth Machine Paul Vigna,Michael J. Casey.2018-02-27 Views differ on bitcoin, but few doubt the transformative potential of Blockchain technology. The Truth Machine is the best book so far on what has happened and what may come along. It demands the attention of anyone concerned with our economic future. —Lawrence H. Summers, Charles W. Eliot University Professor and President Emeritus at Harvard, Former Treasury Secretary From Michael J. Casey and Paul Vigna, the authors of *The Age of Cryptocurrency*, comes the definitive work on the Internet's Next Big Thing: The Blockchain. Big banks have grown bigger and more entrenched. Privacy exists only until the next hack. Credit card fraud is a fact of life. Many of the "legacy systems" once designed to make our lives easier and our economy more efficient are no longer up to the task. Yet there is a way past all this—a new kind of operating system with the potential to revolutionize vast swaths of our economy: the blockchain. In *The Truth Machine*, Michael J. Casey and Paul Vigna demystify the blockchain and explain why it can restore personal control over our data, assets, and identities; grant billions of excluded people access to the global economy; and shift the balance of power to revive society's faith in itself. They reveal the disruption it promises for industries including finance, tech, legal, and shipping. Casey and Vigna expose the challenge of replacing trusted (and not-so-trusted) institutions on which we've relied for centuries with a radical model that bypasses them. The Truth Machine reveals the empowerment possible when self-interested middlemen give way to the transparency of the blockchain, while highlighting the job losses, assertion of special interests, and threat to social cohesion that will accompany this shift. With the same balanced perspective they brought to *The Age of Cryptocurrency*, Casey and Vigna show why we all must care about the path that blockchain technology takes—moving humanity forward, not backward.
