

What Is Deficient Community Health Nursing Diagnosis

Nursing Diagnoses 2009-2011, Custom NANDA International.2010-06-11 A nursing diagnosis is defined as a clinical judgement about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse is accountable. Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care - and to more effectively meeting the need of patients and ensuring patient safety. In an era of increasing electronic patient health records standardized nursing terminologies such as NANDA, NIC and NOC provide a means of collecting nursing data that are systematically analyzed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. 'Nursing Diagnoses: Definitions and Classification' is the definitive guide to nursing diagnoses worldwide. Each nursing diagnoses undergoes a rigorous assessment process by NANDA-I with stringent criteria to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis and a definition. Actual diagnoses include defining characteristics and related factors. Risk diagnoses include risk factors. Many diagnoses are further qualified by terms such as effective, ineffective, impaired, imbalanced, readiness for, disturbed, decreased etc. The 2009-2011 edition is arranged by concept according to Taxonomy II domains (i.e. Health promotion, Nutrition, Elimination and Exchange, Activity/Rest, Perception/Cognition, Self-Perception, Role Relationships, Sexuality, Coping/ Stress Tolerance, Life Principles, Safety/Protection, Comfort, Growth/Development). The book contains new chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' and core references for all nursing diagnoses. A companion website hosts NANDA-I position statements, new PowerPoint slides, and FAQs for students. 2009-2011 edition arranged by concepts New chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' Core references for new diagnoses and level of evidence for each diagnosis Companion website available

Advanced Practice Nursing in the Community Carl O. Helvie. 1997-10-09 In this new text-reference, Dr. Carl Helvie explores the realm of community health care for advanced practice nurses currently working in community care or requiring an awareness and understanding of its salient issues. Simple in its presentation but rigorous in its coverage of related theories and concepts, Advanced Practice Nursing in the Community reviews community health nursing and advanced practice and then presents the Helvie Energy Theory as a guiding framework for the remainder of the volume. This comprehensive volume comprises thoughtful discussions of the economic, environmental, and sociocultural influences on community health, providing a foundation for subsequent chapters on community assessment, analysis, and diagnosis. It examines community intervention, addressing such topics as multilevel community intervention; diffusion and maintenance of community change; mass media and the political process; coalition building among professional and lay organizations as well as nursing centers and the schools; and rural health care. In addition to numerous assessments and other tools found throughout the book, case studies follow nearly every chapter to illuminate the content. Clinicians early in their community advanced practice will find the extensive assessment example of an actual community in the Rudyville Community Analysis especially interesting. Advanced Practice Nursing in the Community is a remarkably comprehensive and thought-provoking work. It is a must for both the community health specialist and advanced practice nurse seeking a reference for public and community health care.

Nursing Diagnoses 2012-14 NANDA International.2014-02-05 A nursing diagnosis is defined as a clinical judgment about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse has accountability (NANDA-I, 2009). Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care - and to more effectively meeting the need of patients. In an era of increasing electronic patient health records, standardized nursing terminologies such as NANDA-I, NIC and NOC provide a means of collecting nursing data that are systematically analysed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. *Nursing Diagnoses: Definitions and Classification* is the definitive guide to nursing diagnoses, as reviewed and approved by NANDA-I. Each nursing diagnosis undergoes a rigorous assessment process by NANDA-I's Diagnosis Development Committee, with stringent criteria used to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis, a definition, defining characteristics, risk factors and/or related factors. Many diagnoses are further qualified by terms such as risk for, effective, ineffective, impaired, imbalanced, self-care deficit, readiness for, disturbed, decreased, etc. The 2012-2014 edition is arranged by concept according to Taxonomy II domains, i.e. Health promotion, Nutrition, Elimination and exchange, Activity/Rest, Perception/Cognition, Self-perception, Role relationships, Sexuality, Coping/ Stress tolerance, Life principles, Safety/protection, Comfort, and Growth/development.
