The Denial of Aging Muriel R. Gillick.2009-06-30 You've argued politics with your aunt since high school, but failing eyesight now prevents her from keeping current with the newspaper. Your mother fractured her hip last year and is confined to a wheelchair. Your father has Alzheimer's and only occasionally recognizes you. Someday, as Muriel Gillick points out in this important yet unsettling book, you too will be old. And no matter what vitamin regimen you're on now, you will likely one day find yourself sick or frail. How do you prepare? What will you need? With passion and compassion, Gillick chronicles the stories of elders who have struggled with housing options, with medical care decisions, and with finding meaning in life. Skillfully incorporating insights from medicine, health policy, and economics, she lays out action plans for individuals and for communities. In addition to doing all we can to maintain our health, we must vote and organize—for housing choices that consider autonomy as well as safety, for employment that utilizes the skills and wisdom of the elderly, and for better management of disability and chronic disease. Most provocatively, Gillick argues against desperate attempts to cure the incurable. Care should focus on quality of life, not whether it can be prolonged at any cost. "A good old age," writes Gillick, "is within our grasp." But we must reach in the right direction.

Retooling for an Aging America Institute of Medicine,Board on Health Care Services,Committee on the Future Health Care Workforce for Older Americans.2008-08-27 As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that

is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

A Bittersweet Season Jane Gross. 2011-04-26 Just a few of the vitally important lessons in caring for your aging parent—and yourself—from Jane Gross in A Bittersweet Season As painful as the role reversal between parent and child may be for you, assume it is worse for your mother or father, so take care not to demean or humiliate them. Avoid hospitals and emergency rooms, as well as multiple relocations from home to assisted living facility to nursing home, since all can cause dramatic declines in physical and cognitive well-being among the aged. Do not accept the canard that no decent child sends a parent to a nursing home. Good nursing home care, which supports the entire family, can be vastly superior to the pretty trappings but thin staffing of assisted living or the solitude of being at home, even with round-the-clock help. Important Facts Every state has its own laws, eligibility standards, and licensing requirements for financial, legal, residential, and other matters that affect the elderly, including qualification

for Medicare. Assume anything you understand in the state where your parents once lived no longer applies if they move. Many doctors will not accept new Medicare patients, nor are they legally required to do so, especially significant if a parent is moving a long distance to be near family in old age. An adult child with power of attorney can use a parent's money for legitimate expenses and thus hasten the spend-down to Medicaid eligibility. In other words, you are doing your parent no favor—assuming he or she is likely to exhaust personal financial resources—by paying rent, stocking the refrigerator, buying clothes, or taking him or her to the hairdresser or barber.

My Mother's Hip Luise Margolies.2004 Some 400,000 hip fractures occur every year, the vast majority among the elderly; all too often these fractures are associated with death or severe disability. After her mother's double hip fracture, Luisa Margolies immersed herself in identifying and coordinating the services and professionals needed to provide critical care for an elderly person. She soon realized that the American medical system is ill prepared to deal with the long-term care needs of our graying society. The heart of *My Mother's Hip* is taken up with the author's day-to-day observations as her mother's condition worsened, then improved only to worsen again, while her father became increasingly anxious and disoriented. As both a devoted daughter and a skilled anthropologist, Margolies vividly renders her interactions with physicians, nurses, hospital workers, nursing home administrators, the Medicare bureaucracy, home care providers, and her parents. In the Lessons chapter that follows each episode, she discusses in a broader context the weighty decisions that adult children must make on their parents' behalf and the emotional toll their responsibility takes. Here she addresses the complex practical issues that commonly arise in such situations: understanding the consequences of hip fracture and its treatment, preparing health care proxies and advanced directives, enabling elders to remain at home, and the heartbreaking dilemma of prolonging life. Like many adult children, Margolies learned her lessons about eldercare in the midst of crises. This book is intended to ease the information-gathering and decision-making processes for others involved in eldercare.

Aging in America Linda L. Schlenker. 2007-09 Aging in America was written to assist seniors, their families, and the people who care for seniors. Information is critical when making choices about health care. Sometimes, the decision that needs to be made is whether to move into an assisted living center or to age at home. When choosing assisted living, one must choose between multitudes of facilities or choose a private group home. If choosing to stay in one's own home, many need to choose an aide to assist them. And, of course, a complex and important choice is whether to stay with traditional Medicare or go with an HMO. As an Occupational Therapist, the author is dedicated to working with seniors in nursing homes, hospitals, hospice care, and in their own homes since 1989. She wrote this book in response to the helplessness and frustration she felt watching the results of our health care system deteriorating over the last 15 years. Aging in America will help seniors and those who love and serve them make

more knowledgeable decisions regarding future health care choices.

Choices in Financing Health Care and Old Age Security Nicholas Prescott.1998 In November 1997 the World Bank and Singapore's Institute of Policy Studies sponsored a conference, Financing Health Care and Old Age Security, to assess and identify potential solutions to these concerns. It addressed a topic of concern to nearly every country, developing and industrial, that is, how to deal with the implications of financing medical care and income security for rapidly aging populations. The issues identified and the solutions proposed can provide insight and guidance for

policymakers, researchers, and others interested in addressing these challenges now. Of special interest are the contributors' analyses of Singapore's unique, integrated approach to managing social risk, which is based on mandatory individual savings accounts.

Ethics, Law, and Aging Review, Volume 9 Marshall B. Kapp, JD, MPH, FCLM. 2003-08-15 This volume explores the concept of safety as applied in the long term care context. Chapters examine the way in which the quest for safety may work either synergistically or adversely upon other worthy social goals. Among the initiatives considered are promoting the decision-making autonomy of patients/clients and their surrogates, enhancing the quality of care and quality of life available to long term care residents, and providing fair compensation for injured victims when serious harm occurs. Questions addressed that are of concern to legal and ethical theorists, social science researchers, and patient/client advocates include: To what extent do litigation and/or regulation accomplish the safety and other legitimate objectives of public policy in the long term care arena? Do the costs of various approaches outweigh the benefits in promoting safety and other goals? How do litigation and regulation compare with alternative approaches to achieving the same goals, in terms of an acceptable cost/benefit balance?

Extending Life, Enhancing Life Institute of Medicine, Division of Health Promotion and Disease Prevention, Committee on a National Research Agenda on Aging. 1991-02-01 Americans are living longer than ever before. For many, though, these extra years have become a bitter gift, marred by dementia, disability, and loss of independence. *Extending Life, Enhancing Life* sets the course toward practical solutions to these problems by specifying 15 research priorities in five key areas of investigation: Basic biomedicine-To understand the fundamental processes of aging. Clinical-To intervene against common disabilities and maladies of older persons. Behavioral and social-To build on past successes with behavioral and social interventions. Health services delivery-To seek answers to the troubling issues of insufficient delivery of health care in the face of increasing health care costs. Biomedical ethics-To clarify underlying ethical guidelines about life and death decisions. Most important, the volume firmly establishes the connection between research and its beneficial results for the quality of life for older persons.

Drug Therapy for the Elderly Martin Wehling. 2012-08-17 With people aged 65 years and older currently making up the fastest growing age group throughout the world, the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age-tailored process of diagnosis and treatment among the elderly. As aging people often suffer from several chronic diseases and are being treated with multiple medications concurrently, unwanted drug interactions occur more frequently. Whereas recent approaches have recommended to remove particular drugs from the medication regimen to avoid adverse effects, *Drug Therapy for the Elderly* underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged. In view of the multimorbidity and polypharmacy situations experienced by elderly patients, this book takes into account the special needs and requirements shown by this group, thus serving as a timely reference for physicians who treat the elderly.

The Real Truth About Aging Michael A. Silverman, M.D., Neil Shulman, M.D., Adam G. Golden, MD. 2010-10-29 The Real Truth About Aging is a comprehensive and well-written book which should be helpful to the general public and health professionals alike. -David Satcher, MD., PhD, Sixteenth Surgeon General of the United States I was getting frustrated searching on the internet for information about a particular type of hip fracture, when I gave up and went to open The Real Truth About Aging and it opened right to the page where there were a series of drawings of the location of different types of hip fractures that can be such an important source of disability for older people. This book is chock full of useful information, like taking a look at nursing homes from all angles: what do the patients think? Or the staff? Are nursing homes REALLY understaffed? Why are older people on too many prescription medications? This book goes beyond the usual fluff of "aging gracefully" books and provides real information that you can use. -J. Douglas Bremner MD, Author of Before You Take That Pill: Why The Drug Industry May Be Bad For Your Health, is also Professor of Psychiatry and Radiology at Emory University School of Medicine Neil Shulman is a multi-talented author whose writings touch everybody, from the youngest to the oldest, and who can deliver important information on serious topics in a very readable and accessible way. -Daniel S. Blumenthal, MD, MPH, Professor and Chair, Department of Community Health & Preventive Medicine, Associate Dean for Community Programs, Morehouse School of Medicine It is refreshing to find a book that is honest and courageous enough to fly against the "happy-talk" genre of books for the elderly. I've never seen anything to match the straight-talking authenticity that explodes off of every page. -Barry Farber, Veteran Radio Talk Show Host As life expectancy continues to increase, millions of seniors are living well into their eighties and nineties. With the aging of the baby boomers, the population of senior citizens will swell dramatically in the coming decades. These statistics will inevitably draw more attention to the aging process. What should middle-aged people expect as they grow older? What should caregivers of the elderly know about normal aging? How can we all stay healthy despite the limitations of age? In this authoritative, user-friendly guide, three experts in geriatric medicine provide the latest evidence on: healthy aging, an understanding of the modern and often confusing health care system, and information about the medical issues affecting frail older adults. They begin with the basic facts of aging, distilling the current research on the underlying molecular mechanisms, organ system changes, and associated disease risks that occur as our bodies get older. They devote separate chapters to preventative medical testing, so-called anti-aging therapies, vitamin and herbal supplements, exercise, and medication problems. In the next section, they present an overview of the American healthcare system, from making the most of a doctor's visit and an explanation of various healthcare professionals involved in elder care to guidelines for choosing a nursing home or assisted care facility. They also discuss the health risks of a stay in the hospital, including antibiotic-resistant infections, temporary delirium, and bedsores. In the following section, they tackle the challenges of caring for a frail senior, covering a range of issues from falls, osteoporosis, and infections, to sleep difficulties, depression, and dementia. A chapter is also devoted to the last days of life and how hospice can help. The authors also provide a section on the need to plan ahead. Among the questions considered are: When should an advance directive be written? How much money will be needed for the elder years? When should a senior give up driving? At a time when geriatric medicine is becoming a rare specialty and doctors receive little training in this area, the wealth of information compiled in this outstanding volume is invaluable. Senio

Choosing Who's to Live James William Walters. 1996 The population is rapidly aging while access to proper and affordable medical treatment is becoming more and more limited. This impasse challenges us to make ethical decisions regarding the rationing of health care. Arguing that de facto rationing is already taking place due to economic necessity and that proper management of this rationing is essential to the fair and ethical treatment of all seeking care, Choosing Who's to Live directly addresses one of the most challenging moral questions of our day. Appearing in the wake of increasing awareness of health care reform, this volume identifies four compelling arguments for managed health care rationing: the number of

citizens over age eighty-five will increase 500 percent by the year 2040; current baby boomers could live longer than today's elderly by seven to fifteen years; new medical technologies are appearing every day; and the ratio of workers to retirees will be 1:4 in forty years instead of the current 1:2.5. In this volume, six leading scholars take the discussion of rationing health care beyond the simple idea of withholding government-funded, live-saving treatment from the very old to a more ethical, effective treatment plan for all.

While home caregiving provides many benefits, it takes careful planning, support, and patience. The American Medical Association Guide to Home Caregiving provides the information you need to take the best possible care of an elderly, ill, or disabled person in a home setting. Written by experts from the American Medical Association, the book explains such essentials as how to: * Plan and arrange a room to adapt to a loved one's needs * Give medications, maintain hygiene, monitor symptoms, deal with incontinence, provide emotional support, and relieve boredom * Choose a home healthcare provider * Pay for home healthcare, including Medicare and Medicaid, and long-term care insurance * Care for a person with Alzheimer's disease or a terminal illness * Choose between alternative living arrangements such as assisted living facilities or nursing homes * Take care of yourself, the caregiver With advice that touches both the physical and the emotional aspects of caregiving, this supportive, practical handbook will help make the experience as successful and rewarding as possible for you and your loved one. For more than 150 years, the American Medical Association has been the leading group of medical experts in the nation and one of the most respected health-related organizations in the world. The AMA continues to work to advance the art and science of medicine and to be an advocate for patients and the voice of physicians in the United States.

The Conversation Angelo E. Volandes.2015-01-13 In this enlightening (Jane Brody, New York Times) book, Harvard Medical School physician Angelo E. Volandes offers a solution to traumatic end-of-life care: talking, medicine's oldest tool. There is an unspoken dark side of American medicine--keeping patients alive at any price. Two thirds of Americans die in healthcare institutions, tethered to machines and tubes at bankrupting costs, even though research shows that most prefer to die at home in comfort, surrounded by loved ones. Dr. Angelo E. Volandes believes that a life well lived deserves a good ending. Through the stories of seven patients and seven very different end-of-life experiences, he demonstrates that what people with a serious illness, who are approaching the end of their lives, need most is not new technologies but one simple thing: The Conversation. He argues for a radical re-envisioning of the patient-doctor relationship and offers ways for patients and their families to talk about this difficult issue to ensure that patients will be at the center and in charge of their medical care. It might be the most important conversation you ever have.

The Price of Life Robert H. Blank. 1997-02-14 How can America become a healthy nation, Blank asks, when it is beset by poverty, illiteracy, and crime? No new health care system can succeed unless or until the links between social problems and sickness are understood-and addressed. On the national level, Blank calls for a more aggressive redistribution of social and public health resources to the poor and elderly; at the same time, he describes sanctions that would encourage individuals to be more careful about their own health, and limit or change destructive behavior.
