Skull Base Surgery Walter C. Jean.2019-02-22 Unique skull-base surgical resource features strategic, technical, and philosophical pearls from master surgeons In a sense, surgeons go into battle every time they enter

the OR. Like soldiers, they must be prepared to make profound sacrifices to protect innocent people (their patients), while putting egos aside and resisting the call of fame. *Skull Base Surgery: Strategies* by Walter Jean and distinguished contributors provides eloquent expression to the inner voices that speak to surgeons during each stage of battle. Unlike other textbooks that only emphasize the technical building blocks surgeons need, this resource focuses on state-of-the-art skull-base procedures, important thought processes, and vital strategies required to perform them. Size and shape variations, diverse biological characteristics, different anatomic locations and extensions, and specific relationships and entanglements with nerves and vessels make all skull base tumors unique and highly challenging. In addition to anatomy, two other important factors need to be considered every time a surgeon enters the OR – the particular circumstances of the patient and surgeon. Throughout this remarkable book, master neurosurgeons take readers on an insightful journey exploring the decision-making process of choosing and executing a surgical approach, with firsthand pearls from the battlefield. Key Highlights Nine sections organized by anatomy cover tumors in the anterior, anterolateral, lateral, central, postero-superior, and postero-inferior skull base regions, and clivus, petrous bone, and ventricles Thirty-two systematically organized chapters flow from clinical presentation and radiographic/anatomical findings of specific patients and tumors – to decision-making and execution of the surgical approach Real-life cases enhance understanding of all the elements that go into each operation Perspectives sections at the end of each chapter embrace the concept of diverse surgeon viewpoints on similar ideas, techniques, and approaches This exemplary book is essential reading for neurosurgery and otolaryngology residents, fellows, veteran practitioners, and allied health personnel who care for patients with skull base tumors.

Much more than just a technical manual of device algorithms, the cases help readers to consolidate their technical knowledge, and improve their reasoning and observation skills so they are able to tackle device troubleshooting with confidence. The 70 cases are arranged in three sections by increasing levels of difficulty to walk readers through all the skills and knowledge they need in an easy to use and structured format. Each case contains a short clinical description and a device tracing followed by a multiple choice question. Answers are supplied with detailed annotations of the tracing and an in-depth discussion of the case, highlighting practical hints and tips as well as providing an overview of the technical function of devices. A useful summary of principal device features and functions is also included. The EHRA Book of Pacemaker, ICD and CRT Troubleshooting is the perfect companion for electrophysiologists, cardiology trainees and technical consultants working with device patients as well as for those studying for the EHRA accreditation exam in cardiac pacing.

Cardiovascular Surgery Rui Manuel de Sousa Sequeira Antunes de Almeida, Fabio Biscegli Jatene. 2018-12-14 This clinical casebook is comprised of surgical cases involving the most important cardiovascular diseases in a concise, easy-to-read format (5x8 in trim size, like other titles in this burgeoning, informal product line in the Springer clinical medicine program). Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as questions and answers (between 8 and 10) about relevant aspects related to the diagnosis and treatment of the addressed disease. The Q&A section will broaden discussion and increase the title's pedagogical value. The casebook features 40 surgical cases in the following thematic areas: Aortic Disease, Arrhythmias, Cardiac Tumors, Coronary Insufficiency, Congenital Heart Disease, Endovascular Therapies, Heart Failure, Heart Transplantation, Mechanical Circulatory Support, Pericardial Disease, Pulmonary Embolism and Valvular Heart Disease. This book will be prepared by the Brazilian Department for Academic Leagues of Cardiovascular Surgery, within the Brazilian Society of Cardiovascular Surgery (BSCVS). This department is the section within BSCVS that consists of the academic leagues of cardiovascular surgery from each university throughout the country. In Brazil, medical academic leagues are organizations that gathers students, interns and residents to discuss a certain topic and promote research and teaching-oriented extra-class activities, supervised by a group of professors. Thus trainees will have involvement in writing the chapters and the senior professor supervisors will edit and finalize the work. Basically, each chapter is written by an intern or resident and, ultimately, his/her supervisor. As the books volume editors, doctors Almeida and Jatene will have final responsibility for the cases and overall manuscript.

The Nose - Revision and Reconstruction Hans Behrbohm, Jacqueline Eichhorn-Sens, Joachim Ulrich Quetz. 2020-09-17 A key problem-solving reference on revision rhinoplasty and reconstructive surgery of the nose Written by a team of expert rhinoplasty and reconstructive surgeons, this practical reference and casebook offers guidelines and step-by-step instructions for dealing with the many minor and major problems that arise in revision rhinoplasty and reconstructive surgery of the nose. Divided into two parts, *The Nose - Revision and Reconstruction* first describes and discusses the principles and practice of these types of surgery. In the second part, 59 carefully selected cases are presented to the reader with the various surgical problems that can be expected. Revision cases are analyzed and demonstrated in a range of common and rare presentations in patients who had previous functional and aesthetic surgery, and reconstructive surgery for nasal defects or after trauma and tumor resections. This reference also addresses issues relating to psychosomatic problems, psychology, body dysmorphic disorder, patient selection and contraindications, the timing of revision surgery, and specific processes in wound healing. The concepts of septorhinoplasty in various stages of life are also discussed, as they deal with general principles that are essential in any rhinoplasty but are particularly important in revision surgery. The express goal of this book is to steer clear of current trends. Thus, it covers the gamut of closed, open, and endoscopic approaches and all graft and suture techniques, employing the full armamentarium of surgical techniques. The book also aims to improve the reader's skills in preoperative analysis and planning so that typical mistakes can be avoided and the best possible results are achieved the first time. In this sense, the book follows the classic principle of learning from mistakes so that they will not be repeated.
