*Decentralisation in Contemporary India* D. Rajasekhar,R

Manjula,M Devendra Babu.2021-09-28 This volume examines the process of decentralisation in India since the 1992 legislation which devolved powers to local government bodies to ensure greater participation in local governance and planning. It studies the functioning of gram sabhas, panchayats, school development committees, water supply and sanitation committees, Residents Welfare Associations, and rural development schemes like the MGNREGS, analysing their effectiveness and tracing the political, administrative, and fiscal powers the local government wields. With case studies from different Indian states, the book examines the functioning of local governance mechanisms and institutions in relation to crucial issues such as citizen participation, the participation of women and disadvantaged groups, fiscal decentralisation, peace-building, economic development, and education, among others. Comprehensive and insightful, this book will be an essential read for scholars and researchers of development studies, political science, public policy, governance studies, regional development, political economy, political sociology, public administration, and South Asian studies, especially those focusing on India.

**Air Quality and Livestock Farming** Thomas Banhazi,Andres Aland,Jörg Hartung.2018-06-13 Air quality has a direct influence on health, welfare and production performance of livestock as the high concentrations of noxious gases, dust and airborne microorganisms are likely to reduce production efficiency and the general welfare of farm animals. Long term exposure to particulates in livestock buildings might also affect the respiratory health of farm workers. Dust in animal buildings contains many biologically active substances such as bacteria, fungi, endotoxins and residues of antibiotics (as a result of veterinary treatments) that are suspected to be hazardous to human health. Furthermore, air pollutants emitted from livestock buildings can reduce air, water and soil quality and can potentially undermine the health of nearby residents. Airborne emissions include ammonia, methane, nitrous oxide, particulates like dust and microorganisms. In addition, other potentially harmful substances such as heavy metals, antibiotic residues and components of disinfectants might be also emitted from livestock

In this book, key aspects of agricultural air quality, such as monitoring, managing and reducing airborne pollutants in and around livestock facilities are reviewed. Features: addressing the raising awareness of the importance of optimal health and welfare for livestock species with contributions from international specialists and researchers providing up-to-date information for professionals involved in modern animal producti This book will be useful for farming professionals, academics, students, policy makers, business leaders, regulatory bodies and agricultural consultants.

### **Religious Entrepreneurism in China's Urban House**

**Churches** Li Ma.2019-06-27 This book offers a unique historical documentation of the development of the ambitious religious entrepreneurism by leaders of the Early Rain church (and later Western China Presbytery leadership), in an effort to gain social influence in China through local institution-building and global public image management. It unravels the social processes of how this Christian community with a public image of defending religious freedom in China was undermined by an internal loss of moral authority. Based on publicly available texts from Chinese social media that aren't readily available in the West as well as in-depth interviews, it is framed by existing scholarship in social theories of the public sphere, charismatic domination in social transition, and the role of power in organizational behaviour. These churches' stories show how Christianity, which has long been politically marginalized in communist China, has not only adapted and challenged the socio-political status quo, but how it was also ironically shaped by the political culture. This is an insightful and critical ethnographic study of one of modern China's most famous house churches. As such, it will be of great interest to scholars of Religion in China as well as those working in Religious Studies, Asian studies, Chinese studies, and Mission Studies more generally.

*5G Mobile Communications* Wei Xiang, Kan Zheng, Xuemin (Sherman) Shen. 2016-10-13 This book provides a comprehensive overview of the emerging technologies for next-generation 5G mobile communications, with insights into the long-term future of 5G. Written by international leading experts on the subject, this contributed volume covers a wide range of technologies, research results, and networking methods. Key enabling technologies for 5G systems include, but are not limited to, millimeter-wave communications, massive MIMO technology and non-orthogonal multiple access. 5G will herald an even greater rise in the prominence of mobile access based upon both human-centric and machine-centric networks. Compared with existing 4G communications systems, unprecedented numbers of smart and heterogeneous wireless devices will be accessing future 5G mobile systems. As a result, a new paradigm shift is required to deal with challenges on explosively growing requirements in mobile data traffic volume (1000x), number of connected devices (10-100x), typical end-user data rate (10-100x), and device/network lifetime (10x). Achieving these ambitious goals calls for revolutionary candidate technologies in future 5G mobile systems. Designed for researchers and professionals involved with networks and communication systems, *5G Mobile Communications* is a straightforward, easy-to-read analysis of the possibilities of 5G systems.

legal, political, and human rights implications. This book argues that the solution to the homosexuality debate in Malawi does not lie in either the criminalization or decriminalization of homosexuality; neither does it lie in homophobia nor heterophobia. However, the solution to the homosexuality debate lies in achieving a harmonious co-existence of both heterosexuals and homosexuals by practicing mutual tolerance. The book concludes by suggesting various activities to be taken by: The Government of Malawi; Gay Rights Activists; Religious Leaders; Traditional Leaders; and Malawian Society to ensure the aforementioned tolerance and understanding is encouraged.

*Into the Wild: Beyond the Design Research Lab* Alan

Chamberlain, Andy Crabtree. 2019-07-03 This edited collection

opens up new intellectual territories and articulates the ways in

which academics are theorising and practicing new forms of

research in 'wild' contexts. Many researchers are choosing to

leave the familiarity of their laboratory-based settings in order to

pursue in-situ studies 'in the wild' that can help them to better

understand the implications of their work in real-world settings.

This has naturally led to ethical, philosophical and practical

reappraisals with regard to the taken for granted lab-based

modus operandi of scientific, cultural and design-based ways of

working. This evolving movement has led to a series of critical

debates opening up around the nature of research in the wild, but

up until now these debates have not been drawn together in a

coherent way that could be useful in an academic context. The

book brings together applied, methodological and theoretical

perspectives relating to this subject area, and provides a platform

and a source of reference material for researchers, students and

academics to base their work on. Cutting across multiple

disciplines relating to philosophy, sociology, ethnography, design,

human-computer interaction, science, history and critical theory,

this timely collection appeals to a broad range of academics in

varying fields of research.

*The Quantification of Illegal, Unreported and Unregulated (IUU) Fishing in the Pacific Islands Region - a 2020 Update* MRAG Asia Pacific (Souter D, Lowe J, Dixon C, Potts J, Banks R, Blaha F).

Illegal, unreported and unregulated (IUU) fishing is a recognised global problem that undermines the integrity of responsible fisheries management arrangements and results in lost value to coastal states. The first attempt at quantifying the value and volume of IUU fishing in tuna fisheries within the Pacific Islands region was undertaken in 2016 using data from 2010-2015 (MRAG Asia Pacific, 2016). That study estimated the total volume of product either harvested or transhipped involving IUU activity in Pacific tuna fisheries was 306,440t, with an ex-vessel value of \$616.11m. Nevertheless, the authors noted that the data and information underlying many of the estimates were highly uncertain and that the outputs should be seen as a 'first cut'. In order to assess changes in the nature and extent of IUU fishing since that time, this study was commissioned as part of the Global Environment Facility-funded Pacific Islands Oceanic Fisheries Management Project II (OFMP II) to undertake a '2020 update' of the original estimates. Broadly, the aim was to undertake an 'apples vs apples' update of the original estimates, using a consistent methodology and taking into account the latest available information. The study period covered the years 2017-2019. Importantly, this preceded any COVID-19 related impacts on monitoring, control and surveillance (MCS) and IUU activity in the region. Broadly, we used a 'bottom up' approach to quantify IUU fishing activity across key IUU risks in four categories: (i) unlicensed/unauthorised fishing, (ii) misreporting, (iii) non-compliance with other license conditions (e.g. shark

finning) and (iv) postharvest risks (e.g. illegal transshipping). 'Best estimate' and minimum/maximum range values were generated for each risk, taking into account the best available information. Monte Carlo simulation was then used to produce probabilistic estimates of IUU activity, taking into account probability distributions assigned within the minimum and maximum range values. Using this approach, estimates of IUU volume and value were developed for each of the three main fishing sectors - purse seine (PS), tropical longline (TLL) and southern longline (SLL) - and then aggregated to produce an overall estimate for Pacific Islands region tuna fisheries. The report sets out the outcomes from the analysis, as well as the main messages arising. The report also identifies priorities for future MCS development in the region across both purse seine and longline fisheries.

### **ACHIEVEMENT OF LOCAL SELF GOVERNMENTS** Dr. Santhi

G. Nair & Dr. K. S. Suresh Kumar .2022-06-07 1.1 Introduction

Management of public finance is the responsibility of the Central, State and Local Self Governments. This arises in the content of the responsibility of the respective goals to look after the welfare of the people. In discharging the duty of the governments the Local Self Governments have to implement various schemes and programmes involving expenditures of different types. In order to finance these expenditures, governments have to mobilize funds by way of taxes in addition to receiving financial assistance from the central and state governments and other institutions.

Mobilization of necessary financial resources and the proper spending of the amounts are the major responsibilities of the governments concerned. The administrative efficiency of a government depends upon the manner in which public finance is successfully managed to the best advantage of the society. This is a difficult task requiring dedication and honesty on the part of the governments at all levels.

The Coconut Palm (Cocos nucifera L.) - Research and

Development Perspectives V. Krishnakumar,P. K. Thampan,M.

Achuthan Nair.2019-02-15 Since the publication of The coconut palm - A monograph in 1960, considerable information has been accrued on the crop through work at research institutes, international organisations and development agencies. Although coconut cultivation is spread over 93 countries, providing employment and creating livelihood opportunities to 64 million families around the globe, smallholder coconut farmers are now facing numerous challenges. The wide gap between the potential and actual yield is a major concern, and as such it is necessary to disseminate knowledge in order to implement research findings. Coconut research in India, one of the leading coconut producing countries, is celebrating its centenary, making this an opportune time to review the research and development advances and the relevant technologies. This detailed, comprehensive book covers all aspects of coconut, from the origins to cultivation, breeding, physiology and value addition, as well as subjects of topical interest like nutrition and health, biotechnology, and climate change and carbon sequestration. Written by leading experts in the fields it emphasises that the livelihood of the small coconut landholders is the ultimate aim of scientists and developmental agencies, and outlines various important strategies to make coconut farming more remunerative globally. It discusses work in all the major coconut growing countries and outlines suggestions for international cooperation. Research work on the crop is

comparatively difficult because of its perennial nature, longevity, height, long juvenile phase, large sized nuts, cross pollination and seed propagation. As these special features necessitate greater investment of resources, time and land, it is all the more imperative that research is not duplicated and the information and experience becoming available around the world is shared so that it can be fully utilised. In this context periodic publications, compiling all the available information on coconut assume greater significance. This book is therefore of great value to researchers, students, extension workers, developmental agencies and progressive farmers.

### **Hydrogenase: Structure, Function, Maturation, and**

**Application** Stefan Frielingsdorf,Francesca Valetti,Constanze Pinske,Chris Greening.2023-10-24 Molecular hydrogen (H<sub>2</sub>) is an important molecule in the metabolism of diverse microorganisms. It is used either as energy source or for the disposal of reducing equivalents depending on environmental conditions. Furthermore, H<sub>2</sub> transmits energy between different species within microbial communities. The enzymes that split or evolve H<sub>2</sub> are called hydrogenases and these metalloproteins can be divided into three phylogenetically unrelated classes distinguishable by the metal composition of their active sites, namely [Fe]-, [FeFe]-, and [NiFe]- hydrogenases. Following a century of hydrogenase research, it is now possible to isolate, handle, and investigate these fragile enzymes. There have been numerous advances in understanding the regulation, function, structures, and maturation of these enzymes, as well as their involvement in

### **Climate Information for Public Health Action**

Madeleine C. Thomson, Simon J. Mason.2018-09-21 Policy-makers are increasingly concerned about the impact of climate variability and change on the health of vulnerable populations. Variations and trends in climatic factors and extreme weather events impact many health outcomes, including malaria, heat stress and undernutrition. Climate Information for Public Health Action is based on the premise that climate knowledge and information can help protect the public from climate-sensitive health risks. With a focus on infectious disease, hydro-meteorological disasters and nutrition, the book explores why, when and how data on the historical, current and future (from days to decades) climate can be incorporated into health decision-making. Created as a collaborative effort between climate and health experts, this book targets a broad technical public health community, alongside development practitioners and policy-makers engaged in climate change adaptation. It may also guide climate experts in the

Signal Processing for 5G Fa-Long Luo, Charlie Jianzhong Zhang. 2016-08-04 A comprehensive and invaluable guide to 5G technology, implementation and practice in one single volume. For all things 5G, this book is a must-read. Signal processing techniques have played the most important role in wireless communications since the second generation of cellular systems. It is anticipated that new techniques employed in 5G wireless networks will not only improve peak service rates significantly, but also enhance capacity, coverage, reliability, low-latency, efficiency, flexibility, compatibility and convergence to meet the increasing demands imposed by applications such as big data, cloud service, machine-to-machine (M2M) and mission-critical communications. This book is a comprehensive and detailed guide to all signal processing techniques employed in 5G wireless networks. Uniquely organized into four categories, New Modulation and Coding, New Spatial Processing, New Spectrum Opportunities and New System-level Enabling Technologies, it covers everything from network architecture, physical-layer (down-link and up-link), protocols and air interface, to cell acquisition, scheduling and rate adaptation, access procedures and relating to spectrum allocations. All technology aspects and major roadmaps of global 5G standard development and deployments are included in the book. Pauleit,Adrien Coly,Sandra Fohlmeister,Paolo Gasparini,Gertrud Jørgensen,Sigrun Kabisch,Wilbard J. Kombe,Sarah Lindley,Ingo Simonis,Kumelachew Yeshitela.2015-04-13 Urbanisation and climate change are among the major challenges for sustainable development in Africa. The overall aim of this book is to present innovative approaches to vulnerability analysis and for enhancing the resilience of African cities against climate change-induced risks. Locally adapted IPCC climate change scenarios, which also consider possible changes in urban population, have been developed. Innovative strategies to land use and spatial planning are proposed that seek synergies between the adaptation to climate change and the need to solve social problems. Furthermore, the book explores the role of governance in successfully coping with climate-induced risks in urban areas. The book is unique in that it combines: a top-down perspective of climate change modeling with a bottom-up perspective of vulnerability assessment; quantitative approaches from engineering sciences and qualitative approaches of the social sciences; a novel multi-risk modeling methodology; and strategic approaches to urban and green infrastructure planning with neighborhood perspectives of adaptation.

**Weather Matters for Energy** Alberto Troccoli, Laurent

Dubus, Sue Ellen Haupt. 2014-01-18 It is the purpose of this book to provide the meteorological knowledge and tools to improve the risk management of energy industry decisions, ranging from the long term finance and engineering planning assessments to the short term operational measures for scheduling and maintenance. Most of the chapters in this book are based on presentations given at the inaugural International Conference Energy & Meteorology (ICEM), held in the Gold Coast, Australia, 8-11 November 2011. The main aim of the conference was to strengthen the link between Energy and Meteorology, so as to make meteorological information more relevant to the planning and operations of the energy sector. The ultimate goal would be to make the best use of weather and climate data in order to achieve a more efficient use of energy sources. This book seeks to realise the same objective.

**Mesoscale Modelling for Meteorological and Air Pollution**

**Applications** Ranjeet S. Sokhi, Alexander Baklanov, K. Heinke Schlünzen. 2018-11-15 'Mesoscale Modelling for Meteorological and Air Pollution Applications' combines the fundamental and practical aspects of mesoscale air pollution and meteorological modelling. Providing an overview of the fundamental concepts of air pollution and meteorological modelling, including parameterization of key atmospheric processes, the book also considers equally important aspects such as model integration, evaluation concepts, performance evaluation, policy relevance and user training.

**Application of Fishes as Biological Models in Genetic**

**Studies** Tony Silveira, Sandra Isabel Morena Abril, Mariana Härter Remiao, Caroline Gomes Lucas. 2023-03-30 Although Gregor Mendel is considered the father of genetics, he has never

taken the credit for his principles on heredity. Mendel's treatises, though they were part of the collection of the largest European libraries in the 19th century, were only rediscovered in 1900, 16 years after his death. Mendel's revolutionary ideas would have given greater strength to the formulation of Charles Darwin's ideas about common descent and gradual evolution through natural selection presented in 1859 in *The Origin of Species*. However, Darwin was not totally ignorant of the possibility of genetic heredity. He even described "invisible characters" emerging in atavistic situations and named his hypothetical particle of heredity as "gemmules." It is remarkable that the "invisible characters" and "gemmules" referred by Darwin are what we now know as genes - a term coined in 1909 by Wilhelm Johannsen that was widely accepted. During the 1930s and 40s, the findings of great proponents of genetics and evolution such as Mendel, Darwin, Wallace, Fisher, Haldane, Wright, Dobzhansky, Mayr, and several others were brought together to form the neo-Darwinian synthesis. In addition, in the 40s, genetics started its molecular revolution, which in the late 70s, driven by sequencing technology, gave rise to the genomics era. It took approximately 100 years to formulate the theoretical foundations of genetics to understand how information is transmitted to the next generations. Now, less than 45 years after the beginning of the genomic era, science is fully capable of identifying complete genomes. Among animals, fishes are one of the most relevant groups in genetic studies. Although fish studies were important in applying and corroborating Mendel's findings in the first decades of the 19th century, these studies contributed little to the development of classical genetics. However, fish have been of great importance for the development of molecular genetics. Several species such as *Carassius auratus*, *Oryzias latipes*, and *Danio rerio* (among several others of productive interest such as *Salmo salar*, *Oreochromis niloticus*, and *Cyprinus carpio*) have been used around the world as biological models. These models

can be used for the study of genes and genomes, epigenetics, and genetic expression. Genetic studies using fish, in addition to increasing genetic knowledge about the species, also serve for a better general understanding of the physiology of metabolic pathways, diseases, evolution, systematics, dispersion, creation, and selection of individuals and lineages. Considering this, this Research Topic aims to bring together studies that present applications of fish as targets in genetic studies.

**Chocolate City** Chris Myers Asch, George Derek

Musgrove. 2017-10-17 Monumental in scope and vividly detailed, *Chocolate City* tells the tumultuous, four-century story of race and democracy in our nation's capital. Emblematic of the ongoing tensions between America's expansive democratic promises and its enduring racial realities, Washington often has served as a national battleground for contentious issues, including slavery, segregation, civil rights, the drug war, and gentrification. But D.C. is more than just a seat of government, and authors Chris Myers Asch and George Derek Musgrove also highlight the city's rich history of local activism as Washingtonians of all races have struggled to make their voices heard in an undemocratic city where residents lack full political rights. Tracing D.C.'s massive transformations--from a sparsely inhabited plantation society into a diverse metropolis, from a center of the slave trade to the nation's first black-majority city, from *Chocolate City* to *Latte City*--Asch and Musgrove offer an engaging narrative peppered with unforgettable characters, a history of deep racial division but also one of hope, resilience, and interracial cooperation.

*Care, Migration and Human Rights* Siobhán Mullally. 2015-02-11

The continuum of exploitation that has historically defined the everyday of domestic work - exclusion from employment and social security standards and precarious migration status - has frequently been neglected. It is primarily the moments of crisis, incidents of human trafficking, slavery or forced labour, that have captured the attention of human rights law. Only recently has

human rights law has begun to address the structured inequalities and exclusions that define the domain of domestic work. This book addresses the specific position of domestic workers in the context of evolving human rights norms. Drawing upon a broad range of case studies, this book presents a thorough examination of key issues such as the commodification of care, the impact of the jurisprudence of the Court of Justice of the European Union and the European Court of Human Rights on 'primary care providers', as well as the effect that trends in migration law have on migrant domestic workers. This volume will be of interest to lawyers, academics and policy makers in the fields of human rights, migration, and gender studies.
