Japanese Naval Aviation Uniforms and Equipment 1937-45 Gary Nila.2012-04-20 This long awaited title provides a fantastic reference resource on the uniforms, dress, flight gear and personal weaponry of the Imperial Japanese Navy airmen of World War II. It includes detailed descriptions of flight gear, including manufacture information, and interviews with IJN pilots such as Sakai, Komachi, Tanimizu, Kawato and Saito regarding the use of a variety of equipment are integrated into the text. Packed with great contemporary illustrations, photographs of original items, and colour pictures, this title provides a meticulously detailed examination of the dress and equipment of the Imperial Japanese Navy's aviators in World War II.

Imperial Japanese Naval Aviator 1937-45 Osamu Tagaya.2003-04-20 The fateful attack on Pearl Harbor forced the Western world to revise its opinion of Japan's airmen. Before World War II (1939-1945), Japanese aviators had been seen as figures of ridicule and disdain; yet the ruthless skill and efficiency of their performance in December 1941 and the months that followed won them a new reputation as a breed of oriental superman. This book explores the world of the Imperial Japanese Naval airman, from the zenith of his wartime career until the turning of the tide, when the skill and experience of the average Japanese airman declined. Cultural and social background, recruitment, training, daily life and combat experience are all covered.

Ki-61 and Ki-100 Aces Nicholas Millman.2015-11-20 This is the story of the elite Japanese Army Air force (JAAF) aces that flew the Kawasaki Ki-61 Hien (Swallow), and the Ki-100 Goshikisen in the Pacific Theatre of World War 2. The former, codenamed 'Tony' by the allies, was a technically excellent aircraft, possessing power, stability and a good rate of climb - differing radically from the usual Japanese philosophy of building light, ultra-maneuvrable fighters. Its pilots soon realised, however, that the type was plagued by a number of dangerous mechanical issues. Then as the war moved relentlessly closer to Japan's doorstep, a desperate, expedient innovation to the Ki-61 airframe by fitting it with a radial instead of inline engine resulted in one of the finest fighters of World War 2 - the Ki-100. This book uses the latest findings to provide a gripping account of some of the most remarkable and hard-pressed fighter pilots of the war. It reveals how these men, unlike so many of their unfortunate late-war colleagues, could surprise Allied aircraft in high-performance fighters and claim successes in the face of enormous odds.

Japanese Naval Aces and Fighter Units in World War II Ikuhiko Hata,Yasuho Izawa.1989 Divided into three parts, this book includes rare photos of the principal Japanese aircraft, concise histories of each air group, and photos and biographies of Japan's leading aces.

J2M Raiden and N1K1/2 Shiden/Shiden-Kai Aces Yasuho Izawa,Tony Holmes.2016-04-21 Although seen as a replacement for the A6M Zero-sen carrier-based fighter, the Mitsubishi J2M Raiden was actually designed as a land-based naval interceptor optimised for speed rather than manoeuvrability. Engine cooling problems for its Mitsubishi Kasai 23 engine, airflow and flight control issues plagued the Raiden's development, but despite these production delays, aces Sadaaki Akamatsu Yoshihiro Aoki, Susumu Ito and Susumu Ishihara all claimed significant scores in the Raiden. Kawanishi's N1K family of fighters were privately developed by the manufacturer from the N1K Kyofu floatplane

fighter. Again plagued by structural and engine maladies, the N1K1-J Shiden eventually entered frontline service in time to see considerable action in the doomed defence of the Philippines in October 1944. Despite suffering heavy losses, the units equipped with new fighter proved that the N1K could more than hold its own against P-38s and F6Fs. The improved N1K2-J Shiden-KAI started to reach the frontline by late 1944 - in time for defence of the Home Islands. Here, it proved to be the best IJN fighter of the war.

F6F Hellcat Aces of VF-9 Edward M. Young.2014-03-18 After Pearl Harbor, the US Navy's VF-9 carrier fighter group formed, seeing action in North Africa, The Marshalls, Kwajelein, Truk, the Marianas Turkey Shoot and on to Tokyo and Okinawa. VF-9 was activated in March 1942 as part of Carrier Air Group (CAG) 9, one of the many air groups the US Navy was hurriedly forming in the aftermath of the Japanese attack on Pearl Harbor. Equipped with Grumman F4F Wildcats, VF-9 first saw combat during the Allied invasion of North Africa in November 1942, where the squadron engaged Vichy French fighters over Morocco. Returning to the United States, VF-9 became one of the first squadrons to receive the Grumman F6F Hellcat and to deploy on the USS Essex, the first of its class of fleet carriers that would form the backbone of the US Navy's Fast Carrier Task Force. VF-9, the Hellcat, and the Essex all entered combat in the fall of 1943. In the hands of the squadron's pilots, and with other Navy fighter squadrons, the Hellcat proved superior to the Imperial Japanese Navy's A6M Zero, which had heretofore been the world's premier carrier fighter plane. During its second combat tour, beginning in August 1943, VF-9 participated in the initial stages of the US Navy's successful island-hopping campaign across the Pacific. Flying strikes against Marcus Island, Wake Island, Rabaul, the invasions of Tarawa and Kwajalein, and the attack on Truk, VF-9 helped prove the Hellcat as a fighter and supported CAG-9 in its relentless attacks on Japanese

forces, helping to validate the concept of the multi-carrier task force and the new carrier doctrine that led to the US Navy's complete defeat of the Imperial Japanese Navy. During its second combat tour VF-9 claimed 120 Japanese aircraft and produced the first Hellcat ace in Lt(jg) Hamilton McWhorter and nine additional aces. VF-9 began its third combat tour in February 1945 aboard the USS Lexington, shifting to the USS Yorktown a month later. The squadron participated in the February strikes against Tokyo and played a significant role in the Okinawa Campaign from March to June 1945. Now equipped with the F6F-5 Hellcat, the squadron claimed 130 Japanese aircraft shot down. Ten VF-9 pilots became aces during the campaign, most notably Lt Eugene Valencia, who ended the war as the second highest scoring Hellcat ace and tied with Lt Cecil Harris as the US Navy's second highest scoring ace overall with 23 victories. Valencia's division became famous as the most successful fighter team in the US Navy during World War 2, claiming a combined total of 43 Japanese aircraft. In addition VF-9 had one of the US Navy's few nightfighter aces in Lt(jg) John Orth, who flew an F6F-5N Hellcat.

Aichi 99 Kanbaku 'Val' Units Osamu Tagaya.2013-02-20 The Aichi Type 99 Carrier Bomber (D3A) - code named 'Val' by Allied intelligence - was the mainstay of the Imperial Japanese Navy's carrier dive-bomber force from 1941 to 1943. It sank more Allied warship tonnage than any other Axis aircraft during World War 2. While the Val's participation in the major carrier battles has been widely covered in other English language sources, details of its operations have received scant attention in English. This book explores the Val's combat operations. Colour illustrations and photographs complement the development of dive-bombing methods in the IJN.

Japanese Army Air Force Aces 1937-45 Henry Sakaida.2012-10-20 Little has been published in English on the Japanese Army Air Force (JAAF), let alone its most successful fighter pilots no less

than 150 of them achieved ace status during eight years of near-constant war, and they are all listed in this volume. From the arid plains of the Mongolian border region to the lush jungles of New Guinea, the JAAF was more than a match for the many opponents it fought against for control of the skies. Indeed, even when the mighty Allied war machine proved almost overwhelming from early 1944 onwards, the elite fighter pilots of the various sentais within the JAAF fought on with near-fanatical loyalty in defence of the Home Islands. Aircraft of the Aces 13 and 22 are also available in a single volume as 'Aces of the Rising Sun 1937-1945'.

Japanese Naval Fighter Aces Ikuhiko Hata, Yashuho Izawa, Christopher Shores. 2013-03-01 This book is as good as we are likely to get on the subject in English. For Pacific Theater aerophiles, it's a must-have. --Barrett Tillman, author of Whirlwind Vivid account of Japanese navy fighter units in combat Contains biographies of all pilots claiming ace status Includes photos of planes like the Zero fighter and the pilots who flew them

The Rise and Fall of the Japanese Imperial Naval Air Service Peter J. Edwards. 2010-11-20 This book describes in considerable detail the people, events ships and aircraft that shaped the Air Service from its origins in the late 19th century to its demise in 1945. The formative years began when a British Naval Mission was established in Japan in 1867 to advise on the development of balloons for naval purposes. After the first successful flights of fixed-wing aircraft in the USA and Europe, the Japanese navy sent several officers to train in Europe as pilots and imported a steady stream of new models to evaluate. During World War One Japan became allied with the UK and played a significant part in keeping the German fleets of ships and submarines at bay in the Pacific and Indian Oceans. However, in the international naval treaties that followed they felt betrayed, since the number of capital ships, battleships and cruisers, that they were allowed was below those

of the USA and the UK. Aircraft carriers were not included, so a program of carrier building was started and continued until World War Two. At the same time they developed an aircraft industry and at the beginning of war their airplanes were comparable, and in some instances superior, to those of the British and Americans. Much prewar experience was gained during Japan's invasion of China, but their continued anger with America festered and resulted in their becoming allied with Germany, Italy and the Vichy France during World War Two. There followed massive successful attacks on Pearl Harbor, the Philippines, the Southern Islands, Port Darwin and New Guinea. The British were decimated and the USA recoiled at the onslaught, taking over a year to regroup and take the war to the Imperial Japanese forces. Throughout the conflict many sea battles were fought and the name Zero became legendary. When Japan eventually capitulated after the Atomic bombs were dropped the Japanese Imperial Air Service was disbanded.

Japanese Military Aircraft Eduardo Cea Ovejero. 2010-08-26 This second volume of the naval aviation of Imperial Japan during World War II relates the history of land-based units, which corresponded to a numeral nomenclature chronological, unlike the first volume, whose units had the name of air base where they were organized. Complete with comprehensive statistics and amazing color profiles.

The Elusive Enemy Douglas Ford. 2011-10-15 The Elusive Enemy explores the evolution of U.S. intelligence concerning the combat capabilities of the Imperial Japanese Navy and its air arm during the interwar period and the Pacific War. Ford contends that the US Navy could not accurately determine the fighting efficiency of Japan's forces until it engaged them in actual battle conditions over an extended period. As the conflict progressed, the Americans were able to rely on a growing array of intelligence material, including POWs, captured documents, and specimens of captured enemy weapons. These sources often revealed valuable information on the characteristics of

Japanese equipment, as well as some of the ideas and doctrines which governed how they carried out their operations. First-hand observations of the Japanese navy's performance in battle were the most frequently used source of intelligence which enabled the US Navy to develop a more informed assessment of its opponent. Ship crews, along with US aviators, were tasked to collect information by making a thorough observation of how the Japanese fought. Action reports described how the Imperial fleet demonstrated a number of weaknesses, the most important of which was a shortage of modern equipment and, after 1942, diminished air power. Yet, he demonstrates how the Japanese remained a resilient enemy who could be defeated only when the Americans deployed sufficient equipment and used it in an appropriate manner. The Office of Naval Intelligence, as well as the intelligence services operating in the Pacific theater, thus had to assess a wide array of conflicting characteristics, and provide a balanced evaluation concerning the strengths and weaknesses of the Imperial navy. At the same time, a large part of the intelligence analysis was undertaken by commanders in the Pacific Fleet. Naval personnel and aircrews assessed the information gained through encounters with the enemy so that they could develop a set of methods whereby US forces were able to defeat the Japanese without incurring excessive casualties and losses. The intelligence services, in turn, played an important role in disseminating the information on the most efficient tactics and weapons that could be used to defeat the Imperial Fleet. The Elusive Enemy aims to explain how American perceptions concerning the Japanese navy evolved during the conflict, with a particular focus on the role of intelligence. It also seeks to introduce a new perspective on the question as to why the U.S. Navy carried out its campaigns during the Pacific War in the manner that it did.

The Dutch Naval Air Force Against Japan Tom Womack.2023-10-04 Following the Japanese

attack on Pearl Harbor, the Dutch Naval Air Force--or Marine Luchtvaart Dienst (MLD)--played a significant but largely overlooked role in the opening months of the Pacific War. With 175 aircraft, the MLD greatly outnumbered the combined forces of its American and British allies. In three months of intense combat, the MLD lost 50 percent of its personnel and 80 percent of its aircraft, as the Netherlands' colonial empire was stripped away. This book details MLD operations during the Japanese invasion of Dutch East Indies, giving a comprehensive overview of organization, personnel, aircraft, equipment and tactics. For the first time in English, the failed evacuation of Java is examined.

Imperial Japanese Navy Aces 1937-45 Henry Sakaida.2012-10-20 The outcome of the Pacific War was heavily influenced by the results of naval battles between the Imperial Japanese fleet and the US Navy. One of the key elements was Japan's large fighter component, which had gained experience over Manchuria, China and Mongolia in the late 1930s. Flying A5Ms, at least 21 pilots achieved 'acedom' securing air superiority for the invaders. Manufacturer Mitsubishi derived much from these campaigns, producing one of the best fighters of the War, the A6M Zero-Sen. Navy pilots

proved to be highly skilled when engaged by the Allied forces, Pacific. Pilots like Nishizawa, Sagita and Sakai scoring more than 60 kills apiece.

Fist from the Sky Peter C. Smith. 2006 - Fascinating look from the Japanese side at Pearl Harbor and the Battle of Midway - Fully authorized account including contemporary interviews with those that flew with Lt. Cdr. Egusa Lieutenant Commander Takashige Egusa was one of the Imperial Japanese Navy's most skillful and influential dive-bomber pilots. He led an attack force against Pearl Harbor, calmly circling his special flame-red Aichi dive bomber before selecting his target. Assaults on the deadly gun batteries of Wake Island followed, as well as air support for the invasion of Ambon. Badly burned at Midway, Egusa returned to duty, only to be killed on his final mission. As

one Japanese officer said, He was the 'God of Dive-Bombing.' Fully placed in historical context and backed by a wealth of detail from archives, family records, photographs, and memories of contemporaries, the full story of Egusa's bravery, leadership qualities, and illustrious career comes to life.

In the process of explaining the navy's essential strengths and weaknesses, the book provides the most detailed account available in English of Japan's naval air campaign over China from 1937 to 1941. A final chapter analyzes the utter destruction of Japanese naval air power by 1944.

Fighters of the Imperial Japanese Army 1939-1945 Eduardo Cea.2007-06-01 Featuring hundreds of color plates, Fighters of the Imperial Japanese Army: 1939-1945 explains the marking of each of the different units. Unit histories are complemented with lists for theatres of operations, aces, aircraft used, and more. In addition, the hierarchy of the Army air force and equivalencies of the units are broken down. A magnificent value for the color plates alone, the text adds up to a must-have for any

Japanese aviation historian or modeler.

Ki-43 'Oscar' Aces of World War 2 Hiroshi Ichimura.2012-10-20 Dubbed the 'Oscar' by the Allies, the Ki-43 Hayabusa Peregrine was the most prolific Japanese fighter of World War 2. Designed for manoeuvrability and speed, the low-wing model meant that firepower and safety had to be sacrificed, with only two machine guns per plane. Despite this, more Japanese pilots achieved Ace status flying the Hayabusa than any other plane. This book expertly charts the experiences of the pilots and discusses the early stages of the war in South-East Asia, China, Burma and New Guinea. Accompanied by detailed appendices and specially commissioned artwork, this is the first volume in English to focus exclusively on the exploits of the Ki-43.

The book begins by looking at the land- and aircraft carrier-based navy fighter units and their operations from 1932 to

1945, as well as their history and achievements. This is followed with biographical details for all pilots who claimed eight or more aerial victories. The thorough appendix provides detailed listings of all pilots known to have claimed five or more victories (and thus considered to be “aces”), listings of the graduation from training of all Japanese Navy fighter pilots, and of fighter pilot casualties. Photographs, maps, and artist’s side-view drawings and paintings of aircraft relevant to each of the units are also included. This revised edition is a companion volume to Japanese Army Air Force Fighter Units and Their Aces, 1931-1945.

Imperial Japanese Navy Aircraft Carriers 1921-45 Mark Stille.2012-05-20 The Imperial Japanese Navy was a pioneer in naval aviation, having commissioned the world's first built-from-the-keel-up carrier, the Hosho. Throughout the 1920s and 1930s, it experimented with its carriers, perfecting their design and construction. As a result, by the time Japan entered World War II and attacked the United States at Pearl Harbor in 1941, it possessed a fantastically effective naval

aviation force. This book covers the design, development and operation of IJN aircraft carriers built prior to and during World War II. Pearl Harbor, Midway and the first carrier vs carrier battle, the battle of the Coral Sea, are all discussed.

Japanese Army Air Force Fighter Units and Their Aces Ikuhiko Hata, Yasuho Izawa, Christopher Shores. 2008-03-15 Hitherto only available in Japanese text, this unique work is now published in English language format and provides an in-depth review of the fighter units of the Imperial Japanese Army Air Force and their pilots. Commencing with a detailed study of the development, equipment and operations flown by this force since its inception immediately after the end of World War I, until the catastrophic conclusion of World War II, the initial section deals with the wars in China and Manchuria, as well as the Pacific War of 1941-45. Details of the more notable actions in which each unit was involved are also provided. Biographical notes relating to all of the more notable fighter pilots form the third section, whilst the book is liberally provided with supporting listings and a glossary of Japanese terms. The whole is heavily illustrated with photographs of the majority of the pilots and of typical aircraft of many of the units, together with line drawings indicating the unit markings carried.

Fighters of the Dying Sun Justo Miranda. 2021-07-11 The first B-29 flew over Tokyo on 1 November 1944. It was a photographic reconnaissance aircraft ironically named 'Tokyo Rose'. The Ki-44 fighters of the 47th Sentai took off to intercept it but as it turned out the Superfortress flew at such an altitude and speed that they could not reach it. The Ki-44-II-Otsu had been specifically designed for this type of interception and could reach the astonishing rate of climb of 5,000 m in

four minutes; however it was not good enough. During the following ten months, a devastating bombing campaign of thousands of Superfortress destroyed 67 Japanese cities and half of Tokyo. The cultural shock and the political consequences were huge, when it was realised that the Japanese industry was not able to produce the specially heat and stress-resistant metallic alloys that were required to manufacture the turbo superchargers needed by the fighters in charge of defending the Japanese mainland. They lacked the essential chromium and molybdenum metals to harden the steel. This fact thwarted the manufacturing of numerous advanced projects of both conventional fighters and those derived from the transfer of German technology fitted with turbojets and rocket engines. They are thoroughly described in this book.

Last to Die Stephen Harding.2015-07-14 On August 18, 1945 -- three days after Japan announced it would cease hostilities and surrender -- U.S. Army Air Forces Sergeant Anthony J. Marchione bled to death in the clear, bright sky above Tokyo. Just six days after his twentieth birthday, Tony Marchione died like so many before him in World War II -- quietly, cradled in the arms of a buddy who was powerless to prevent his death. Though heartbreaking for his family, Marchione's death would have been no more notable than any other had he not had the dubious distinction of being the last American killed in World War II combat. An aerial gunner who had already survived several combat missions, Marchione's death was the tragic culmination of an intertwined series of events. The plane that carried him that day was a trouble-plagued American heavy bomber known as the B-32 Dominator, which would prove a failed competitor to the famed B-29 Superfortress. And on the ground below, a palace revolt was brewing and a small number of die-hard Japanese fighter pilots decided to fight on, refusing to accept defeat. Based on official American and Japanese histories, personal memoirs, and the author's exclusive interviews with many of the story's key participants,

Last to Die is a rousing tale of air combat, bravery, cowardice, hubris, and determination, all set during the turbulent and confusing final days of World War II.

Japanese Army Fighter Aces Ikuhiko Hata, Yashuho Izawa, Christopher Shores. 2012-04-05 In-depth review of Imperial Japanese Army Air Force fighter units and pilots Detailed study of equipment (e.g., the Zero fighter), operations from Pearl Harbor to kamikaze attacks, and pilots who achieved ace status Heavily illustrated with photos of pilots, aircraft, and unit insignia

Aces of the Rising Sun 1937-1945 Henry Sakaida. 2002-08-19 Very little has been published in English on the air arms of the Japanese Army and Navy, and the pilots who flew for them. Yet between 1937 and 1945, 150 JAAF and 21 Imperial Japanese Navy pilots achieved 'ace' status in eight years of near-constant warfare. This book relates the experiences of both air forces, revealing how the JAAF aces achieved their scores flying over terrain ranging from the Mongolian plains to the jungles of New Guinea, and how the IJN pilots drew on their experience of fighting over Manchuria, China and Mongolia to take on Allied forces in the Pacific

The Air Force of the Japanese Imperial Navy Eduardo Cea. 2008 At the beginning of World War II, the Imperial Navy had created the finest naval aviation corps in the world. Japanese aircraft were at least the equals of anything then flying in the West, and in some cases (as with the legendary Zero Fighter) were substantially better. Japanese aircrews were superbly trained and had been battle tested in the conflict in China during the late 1920's. When war tore across the Pacific in December 1941, the IJNAF was more than a match for any of its opponents. It is not surprising, then, that Japanese aviators scored victory after stunning victory during the first six months of the war, from the attack on Pearl Harbor, through the sinking of the British men-of-war Prince of Wales and Repulse, to the fearsome raids on northern Australia and the IJN's rampage through the Indian

Ocean in April 1942. Only after the defeat at Coral Sea and the debacle at Midway was their force finally able to be engaged on nearly equal terms.
