Institutional Literacies Stuart A. Selber.2020 Information technologies have become central to all functions of higher education, including writing and communications departments. Understanding how academic IT professionals make decisions, manage projects, and interact with academic departments is key for the faculty, administrators, and staff in those departments. To aid in this understanding, Stuart Selber spent two years embedded in Penn State's Teaching and Learning with Technology unit. His book offers new insights into the practices, attitudes, and assumptions of academic IT professionals and argues that composition faculty should collaborate more closely and engage more deeply with IT staff as composition technology projects are planned, implemented, and expanded. To help them do so, the book offers a three-part heuristic, reflecting the reality that academic IT units are complex and multilayered, with historical, spatial, and textual dimensions--

Telecommunications Network Planning Brunilde Sansò,Patrick Soriano.2012-12-06

Telecommunications - central to our daily lives - continues to change dramatically. These changes are the result of technological advances, deregulation, the proliferation of broadband service offers,

and the spectacular popularity of the Internet and wireless services. In such adynamic technological and economic environment, competition is increasing among service providers and among equipment manufacturers. Consequently, optimization of the planning process is becoming essential. Although telecommunications network planning has been tackled by the Operations Research community for some time, many fundamental problems remain challenging. Through its fourteen chapters, this book covers some new and some still challenging older problems which arise in the planning of telecommunication networks. Telecommunications Network Planning will benefit both telecommunications practitioners looking for efficient methods to solve their problems and operations researchers interested in telecommunications. The book examines network design and dimensioning problems; it explores Operation Research issues related to a new standard Asynchronous Transfer Mode (ATM); it overviews problems that arise when designing survivable SDH/SONET Networks; it considers some broadband network problems; and it concludes with three chapters on wireless and mobile networks. Leading area researchers have contributed their recent research on the telecommunications and network topics treated in the volume.
