**Vascular Surgery** Rodney A. White, MD, Larry H. Hollier. 2008-04-15 This second edition of a very successful vascular surgery text was developed in order to address significant changes that have occurred in contemporary vascular surgery and to highlight new information that has developed regarding vascular imaging, interventional and endovascular procedures. The overall length of the text is slightly shorter than the first edition with relevant core chapters being retained to emphasize the basic science nature of the text, with approximately 60% of the material undergoing major revisions or being new chapters. The significant change from the first text is an emphasis on vascular pathology and physiology that is relevant to current practice including information that is currently included on the vascular board examinations. A new emphasis on endovascular therapies has been added by including five chapters on endovascular techniques and an additional section with six chapters comparing conventional vascular reconstruction to endovascular methods. These new chapters address the most important issue in contemporary vascular surgery, i.e., the role of endovascular methods in treating vascular lesions and the impact that this has on training and credentialing. A unique aspect of this book differentiating it from other texts is a comparison of conventional methods with the endovascular techniques. Overall the text provides a comprehensive perspective of contemporary vascular surgery and future perspectives. The authors are preeminent in

the field and are most capable for addressing the assigned topics with the goals being to provide an updated and forward looking text that accommodates the needs of practicing and training vascular surgeons.

*Complications in Vascular and Endovascular Surgery* Jonathan J Earnshaw,,Michael

Wyatt.2012-01-01 The aim of this book is to help clinicians to reduce the risk of complications after vascular and endovascular surgery. Whilst it is a surgical truism that the surgeon who does the most operations has the most complications (an acknowledgement of the fact that all vascular and endovascular procedures are potentially hazardous, and some extremely so), some surgeons seem to have more complications than others. This book is for all surgeons and radiologists who accept the challenge continually to improve their results. Each chapter is authored by an experienced (endo)vascular specialist who will have witnessed firsthand the perils and pitfalls of vascular procedures. They have seen all the complications, and even occasionally made errors of judgement. The chapters are full of information to help the reader avoid similar hazards in future. We live in a world of high patient expectation, where complications are seen as 'someone's fault'. Clinicians are familiar with innovations such as outcomes audit and assessment, procedural governance and quality improvement programmes. There is pressure to show progressive improvement. First class surgery is a combination of knowledge and skill and perhaps just a little luck, though as is oft quoted 'the more you practice, the luckier you get'. The information in this book will provide insights, protocols, and tips and tricks to minimise the risks of procedures in vascular and endovascular surgery. It is therefore essential reading for anyone who treats patients with vascular disease.
