Amazing Light Raymond Y. Chiao.2011-09-22 This Festschrift is a collection of essays contributed by students, colleagues, and admirers to honor an eminent scholar on a special anniversary: Charles Hard Townes on the occasion of his 80th birthday, July 28, 1995. In 1964, Townes shared the Nobel Prize in physics with Alexander Mikhailovich Prokhorov and Nikolai Gen nadyevich Basov for fundamental work in the field of quantum electronics, which has led to the construction of oscillators and amplifiers based on the maser-laser principle. His contributions have covered a much wider area, however. His fruitful interests spanning several decades have included many scientific subjects, including, microwave spectroscopy and astrophysics (other articles in this volume will expand further on this point). He has also contributed to public service, having served as the chairman of the Science and Technology Advisory Committee for NASA's Apollo program, and as a member and vice chairman of the President's Science Advisory Committee. As the enormous breadth of contributions from his students shows, he has educated scholars who are now in a wide range of fields. The contributions from his many admirers, among whom are nine fellow Nobel laureates, attest to his impact on many disciplines ranging from electrical engineering to medicine. His influence extends even to theology, as is indicated by one essay. The broadly international character of this Festschrift reflects his deep belief in the international, universal nature of science.

The World of Peptides Theodor Wieland,Miklos Bodanszky.2012-12-06 Almost two centuries ago proteins were recognized as the primary materials (proteios = primary) of life, but the significance and wide role of peptides (from pepsis = digestion) in practically all life processes has only become apparent in the last few decades. Biologically active peptides are now being discovered at rapid intervals in the brain and in other organs including the heart, in the skin of amphibians and many other tissues. Peptides and peptide-like compounds are found among toxins and antibiotics. It is unlikely that this process, an almost explosive broadening of the field, will come to a sudden halt. By now it is obvious that Nature has used the combination of a small to moderate number of amino acids to generate a great variety of agonists with specific and often highly sophisticated functions. Thus, peptide chemistry must be regarded as a discipline in its own right, a major branch of biochemistry, fairly separate from the chemistry of proteins. Because of the important role played by synthesis both in the study and in the practical preparation of peptides, their area can be considered as belonging to bio-organic chemistry as well. The already overwhelming and still increasing body of knowledge renders an account of the history of peptide chemistry more and more difficult. It appears therefore timely to look back, to take stock and to recall the important stages in the development of a new discipline.

The Methods and Materials of Demography Henry S. Shryock.2013-10-22 Like the original two-volume work, this work attempts to present a systematic and comprehensive exposition, with illustrations, of the methods used by technicians and research workers in dealing with demographic data. Protestant Women Novelists and Irish Society 1879-1922 Lisbet Kickham.2004 Reviews a great number of novels by Anglo-Irish women novelists that - with few exceptions - have attracted little attention from contemporary and modern literary critics. The main focus is on the literature and its society. The disposition of this study reflects the areas of contention experienced by the Anglo-Irish of the period. Chapter 1, Land and Politics, deals with the Anglo-Irish landlords and their families. Chapter 2 is devoted to different aspects of religion. Chapter 3, Race, discusses the Celt and his presumed characteristics. The 'other' race, the English, will get some attention, as will the Protestant Anglo-Irish themselves. Chapter 4

focuses on this new ruling class, 'the new Irish'. A brief conclusion follows.

New Right, New Racism Amy Elizabeth Ansell.2016-07-27 New Right, New Racism is a comparative analysis of the role of racialized symbols in the right turn of US and British politics in the late 1970s through to today. The author argues that the symbol of race has been central to the New Right's project to redefine the cultural codes and broader social imaginary upon which the consensus politics of the post-war years was built. In the process of mobilizing race as an ideological articulator of the exit from consensus politics, the New Right has promoted a new form of racism qualitatively distinct from more traditional forms.

Building the Responsive Campus William G. Tierney.1999-03-03 As we enter the 21st century, colleges and universities are in great flux. Fiscal shortfalls, a suspicious public, a more consumer-driven market, and a host of other concerns demand that postsecondary institutions restructure themselves. Building the Responsive Campus offers a critique of modern academia, as well as a proposal for making campuses more effective -- that is, better at meeting clients and customers' needs. Author William G. Tierney addresses the problems that many academic institutions have today in clinging to the practices and organization of the past. He argues that institutions of higher learning are in demand of dramatic organizational changes. The chapters look at key critical issues -- faculty roles and rewards, presidential leadership, strategic planning, assessment, and evaluation--utilizing the latest ideas to bring about structural reform and high performance. The timely volume takes a data-driven approach, using research derived from ethnographies, case studies, and interviews carried out over the past 15 years. By outlining many of the organizational problems that colleges and universities face today, Tierney reveals workable solutions.

Unsustainable Fishing Great Britain. Parliament. House of Lords. European Union Committee,Select Committee On The European Union.2001-01 This report is an account of an inquiry, the purpose of which was to prepare the ground for a review of the Common Fisheries Policy (CFP) by identifying the issues which must be addressed in the European Commission's forthcoming Green Paper and to offer some opinions on what the review should be seeking to achieve. The inquiry did not consider the problems of the Mediterranean. Currently, the stocks of many fish in the European Community waters have fallen to critically low levels. The report states that the CFP, which has been in place for seventeen years, has totally failed to achieve its fundamental objective of ensuring that fishing capacity and effort is consistent with self-sustaining fish populations and food chains. Despite quota controls and a range of technical and administrative measures, fishing continues at an unsustainable rate. Repeated warnings from the International Council for the Exploration of the Seas (ICES) and others have been largely ignored primarily because of a lack of political will in the Member States of the European Union. Member States must provide funds to support those who become employed when necessary cuts in fishing are imposed. Without this action, the future of the CFP is in jeopardy. The Committee concludes that the Green Paper, to be published early in 2001, may be the last opportunity to put in place a single, coherent policy. The Committee would expect the Green Paper to set out the medium and long term objectives of a reformed CFP after December 2002 and recommends that the priority objective of the CFP, to which all other objectives should conform, should be: 'to ensure that the exploitation of marine resources takes account not only of ecological processes but also social and economic consequences'. A number of other objectives are laid out and recommendations are made. A recommendation is made to the House that the Report should be the subject of debate as it raises important issues of policy.

European Armies and the Conduct of War Hew Strachan.2005-07-28 Discussing the key issues of modern warfare, Hew Strachan's work examines the theory and practice of land warfare in Europe since 1700. Looking at warfare in the context of social and political change, Dr. Strachan interprets his subject matter as widely as possible, and *European Armies and the Conduct of War* considers the roles of air power and the impact of the United

States on European military developments. Through the eyes of the major theorists of the day, European Armies examines: * how the social and political influences which shape armies, also mould the attitude of those armies to warfare * the story of technical innovation * the mounting pace of industrialization and its impact of warfare. Recent military history has tended to focus on the relationship between armies and society and there has been much original research on the subject of the conduct of war. This book brings these approaches together, providing information and insight vital to the study of this fascinating era.
