In the subsequent chapters, the authors comprehensively review the current state of the clinical trial evidence for Chinese herbal medicines (Chapter 5), acupuncture (Chapter 7), other Chinese medicine therapies (Chapter 8) and combination Chinese medicine therapies (Chapter 9) in the management of colorectal cancer, as well as analyse and evaluate the results of these studies from an evidence-based medicine perspective. The chapter then covers that cancer from the perspective of Oriental medicine. Case studies illustrate the integration of treatment for each cancer type, raising important issues and considerations associated with specific cancers and treatments. Formulas are presented within the context of conventional treatment, intended to enhance the effectiveness of treatment and/or treat side effects without undermining the treatment's function. Each formula is followed by a discussion of how and why the herbs are used, including classical Chinese theory and relevant pharmaceutical studies. Staging and the age and performance status of various patients is used as a means by which to explain how formulas are changed. Case studies explore issues related to the integration of treatment for each type of cancer.

Modern Tongue Diagnostics in Chinese Medicine Hong Chun Yin.2018-07-15 This book is an introduction to diagnosis and treatment through looking at the tongue.Modern tongue diagnostics combines traditional Chinese medical tongue diagnostics with bio-holographic theory, using the holographic reflections on the tongue to diagnose disease, thereby improving the accuracy of the diagnosis in terms of what and where the illness is. This book introduces in detail the theory of the tongue midline as well as the positions where various organs are reflected on the tongue, as well as the appearances of the tongue corresponding to various pathological changes in these organs. This book is the first to publicize the author's many patented tongue diagnosis images, such as the panoramic hologram image which for the first time revealed the position and posture of the human body as it appears holographically on the tongue, the head and neck gland distribution image, the head and facial features map, and more. The author, aided by the experiences of previous scholars, discovered the position and posture of the human body as it appears holographically on the tongue. The holographic state of the human body as it appears on the tongue is in a prone position, that is, the head area is reflected at the tip of the tongue with the face facing forward, the legs and buttocks are reflected at the back of the tongue, and the four limbs are reflected in a bent position on the two sides of the tongue. The author has discovered how the glands of the head and neck are mapped on the tongue, especially the map of the thyroid gland on the tongue, refuting the common belief about how the thyroid gland is reflected on the tongue. Contrary to common belief, the thyroid gland is not reflected on the two sides of the cervical vertebrae reflection area on the tongue, but instead is on the two sides of the upper jiao area (the upper third of the tongue). The author has determined the areas of the tongue where various organs are reflected, as well as the changes in tongue appearance corresponding to the diseases in these organs. For example, heart disease is often reflected on the tongue as cracks or sunken areas in the heart reflection area of the tongue. In many years of clinical experience using tongue diagnostics, I have attempted to combine tongue diagnostics with herbal medicine and acupuncture, and have attained significant improvements in clinical efficacy, and have created a shortcut for accelerating diagnosis and improving efficacy. This book will mainly introduce diagnosis and differentiation based on the tongue with some case study.

Data Analytics for Traditional Chinese Medicine Research Josiah Poon,Simon K. Poon.2014-02-19 This contributed volume explores how data mining, machine learning, and similar statistical techniques can analyze the types of problems arising from Traditional Chinese Medicine (TCM) research. The book focuses on the study of clinical data and the analysis of herbal data. Challenges addressed include diagnosis, prescription analysis, ingredient discoveries, network based mechanism deciphering, pattern-activity relationships, and medical informatics. Each author demonstrates how they made use of machine learning, data mining, statistics and other analytic techniques to resolve their research challenges, how successful if these techniques were applied, any insight noted and how these insights define the most appropriate future work to be carried out. Readers are given an opportunity to understand the complexity of diagnosis and treatment decision, the difficulty of modeling of efficacy in terms of herbs, the identification of constituent compounds in an herb, the relationship between these compounds and biological outcome so that evidence-based predictions can be made. Drawing on a wide range of experienced contributors, *Data Analytics for Traditional Chinese Medicine*

Research is a valuable reference for professionals and researchers working in health informatics and data mining. The techniques are also useful for biostatisticians and health practitioners interested in traditional medicine and data analytics.

Essentials of Chinese Medicine Zhanwen Liu.2009-09-29 The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

Volume One systematically introduces the basic theories and the diagnostic methods of Chinese Medicine, providing a concise presentation that is suitable for both teaching and self-study. Use of illustrations throughout also reinforce the theories and facts demonstrated in this valuable resource on the fundamental principles of Chinese Medicine.

Each case provides a systematic analysis of the patient's presentation, from the cause and site of the disorder to the underlying theory of the case.
