Down to Earth National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Mapping Science Committee, Committee on Geography, Committee on the Geographic Foundation for Agenda 21. 2002-11-24 In 1992, world leaders adopted Agenda 21, the work program of the 1992 U.N. Conference on Environment and Development. This landmark event provided a political foundation and action items to facilitate the global transition toward sustainable development. The international community marked the tenth anniversary of this conference in Johannesburg, South Africa, in August 2002. Down to Earth, a component of the U.S. State Department's Geographic Information for Sustainable Development project for the World Summit, focuses on sub-Saharan Africa with examples drawn from case-study regions where the U.S. Agency for International Development and other agencies have broad experience. Although African countries are the geographic focus of the study, the report has broader applicability. Down to Earth summarizes the importance and applicability of geographic data for sustainable development and draws on experiences in African countries to examine how future sources and applications of geographic data could provide reliable support to decision-makers as they work towards sustainable development. The committee emphasizes the potential of new technologies, such as satellite remote-sensing systems and geographic information systems, that have revolutionized data collection and analysis over the last decade.

Geography of Claudius Ptolemy Claudius Ptolemy,Edward Luther Stevenson,Joseph Fischer.2011-03-01 Geography of Claudius Ptolemy, originally titled Geographia and written in the second century, is a depiction of the geography of the Roman Empire at the time. Though inaccurate due to Ptolemy's varying methods of measurement and use of outdated data, Geography of Claudius Ptolemy is nonetheless an excellent example of ancient geographical study and scientific method. This edition contains more than 40 maps and illustrations, reproduced based on Ptolemy's original manuscript. It remains a fascinating read for students of scientific history and Greek influence. CLAUDIUS PTOLEMY (A.D. 90- A.D. 168) was a poet, mathematician, astronomer, astrologer, and geographer who wrote in Greek, though he was a Roman citizen. He is most well-known for three scientific treatises he wrote on astronomy, astrology, and geography, respectively titled Almagest, Apotelesmatika, and Geographia. His work influenced early Islamic and European studies, which in turn influenced much of the modern world. Ptolemy died in Alexandria as a member of Greek society.

Griffiths.2013-06-17 The Atlas of African Affairs is divided into five sections dealing with environmental, historical, political and economic issues and with Southern Africa. Throughout, the book presents an interdisciplinary, integrated perspective on African affairs. Most of the chapters deal with continent-wide themes and are illustrated by maps of Africa as a whole drawn to a standardised outline of the same map projection and scale. Other chapters, often by way of example, discuss parts of the continent or individual countries and are illustrated with appropriate maps. The basic format of integrated text and maps is supplemented by guides to further reading at the end of each

section as well as a series of detailed statistical tables at the end of the book.

The Conservation Atlas of Tropical Forests International Union for Conservation of Nature and Natural Resources.1992 Africa's forests are being depleted at a faster rate than of any other continent. A major increase in the population growth rate began after World War II and it is now running at an annual rate of 2.9 per cent, resulting in massive demands for agricultural land, water, fuelwood and other products. There is no simple answer to environmental degradation and forest conservation must be part of a broader process of managing the landscape. Here to address this topic is the new Conservation Atlas of Tropical Forests: Africa, the first authoritative reference work on this subject. The second in a series this Conservation Atlas follows the format of the acclaimed Conservation Atlas of Tropical Forests: Asia and the Pacific (1991). Part I describes the issues, history of forests and climate, biological diversity, conservation of large mammals, and the peoples of the forests. Included are discussions of the links between population, environment and agriculture, the timber trade, protected areas system and the future for Africa's forests. Part II of the Atlas is a country by country survey of the forests of Africa. Stunning four-color maps, in a 9 x 12 format, have been compiled from satellite and radar imagery, aerial photography, and the latest information provided by forestry departments and development agencies. Both maps and text have been prepared and reviewed by a broad spectrum of specialists. The Atlas also includes four-color photographs and sketch maps. They represent the best visual portfolio available of Africa's forests today. For anyone interested in environmental issues, geography, forestry, development, economics, and the African region, this Atlas will be an essential resource.

Black Atlas Judith Madera.2015-06-19 Black Atlas presents definitive new approaches to black geography. It focuses attention on the dynamic relationship between place and African American literature during the long nineteenth century, a volatile epoch of national expansion that gave rise to the Civil War, Reconstruction, pan-Americanism, and the black novel. Judith Madera argues that spatial reconfiguration was a critical concern for the era's black writers, and she also demonstrates how the possibility for new modes of representation could be found in the radical redistricting of space. Madera reveals how crucial geography was to the genre-bending works of writers such as William Wells Brown, Martin Delany, James Beckwourth, Pauline Hopkins, Charles Chesnutt, and Alice Dunbar-Nelson. These authors intervened in major nineteenth-century debates about free soil, regional production, Indian deterritorialization, internal diasporas, pan-American expansionism, and hemispheric circuitry. Black geographies stood in for what was at stake in negotiating a shared world.

Regional Development in Africa Norbert Edomah.2020-08-19 Regional development is a broad term but can be seen as a general effort to reduce regional disparities by supporting (employment and wealth-generating) economic activities in regions. In the past, regional development policy tended to try to achieve these objectives by means of large-scale infrastructure development and by attracting inward investment” (OECD, 2014).A territorial and regional approach to development is crucial in addressing regional challenges, regional economic competitiveness, and reducing socio-economic discrepancies. This book provides a forum to articulate and discuss Africa’s regional development issues in view of the rising opportunities within the African region. This volume contains 14 chapters and is organized in four sections: Introduction; Industry, Trade and Investment in Africa; Agricultural Services and the Water-energy-food Nexus in Africa; and Environmental and Cultural Dimensions to Africa’s Regional Development.
