Genetic Models of Immune and Inflammatory Diseases Abul K. Abbas, Richard A. Flavell. 2012-12-06 This book contains the proceedings of the Sero Symposia USA international symposium on Genetic Models of Immune and Inflammatory Diseases held on October 20 to 23, 1994, in Savannah, Georgia. The advent of methods for introducing genes into the germlines of mice, and for targeted disruption of particular genes by homologous recombination, has provided scientists in many disciplines with an extraordinarily powerful set of analytical tools. Some of the most informative applications of transgenic and gene knockout technology have been in studies of lymphocyte development and activation. The goal of this symposium was to bring together investigators using these genetic approaches for analyzing the immune system, with a view to defining common themes and novel directions. Transgenic mice have a wide variety of important applications in immunology. Defined proteins can be expressed in selected tissues throughout development, thus acquiring the essential characteristic of self antigens. Such models have been used to study how immune responses to these artificially created self antigens are controlled. Antigen receptors of lymphocytes have been expressed as transgenes, and because lymphocytes are endowed with the unique property of allelic exclusion, such transgenic mice become essentially monospecific. Immunomodulatory agents have been expressed in defined tissues or throughout the body, providing tools for studying the functional consequences of dysregulated expression of biological response modifiers.

Inmunología celular y molecular + Student Consult Abul K. Abbas, Andrew H. H. Lichtman, Shiv Pillai. 2012-05-18 Nueva edición de la obra de referencia en Inmunología de la mano del Dr. Abbas, que una vez más se perfila como la obra de primera elección para el estudiante que debe enfrentarse con la ardua asignatura de Inmunología. La obra se presenta como una guía excepcional, tanto por su contenido estructurado como por su magnífica ilustración, explicando la inmunología a nivel molecular, celular y de todo el organismo en su conjunto. Se hace especial énfasis en la relevancia clínica de la inmunología a través de la inclusión de un gran

número de controversias sobre las enfermedades inmunológicas humanas más importantes y prevalentes. En esta nueva edición, los autores han hecho un magnífico esfuerzo de actualización y revisión de la disciplina, sin que ello suponga un aumento en el número de páginas. Así, se ha procedido a una reorganización global de contenidos en el que, si bien se han mantenido los 20 capítulos, la presentación de contenidos es mucho más coherente. Asimismo, la obra entera ha sufrido un exhaustivo trabajo de actualización, incluyendo los más recientes avances en la disciplina, que incluyen conceptos relativos a: inflamomas, biología de las células Th17 y al desarrollo de las células T helper. En cuanto a los Anexos, se mantienen los tres correspondientes a la anterior edición y se incorpora uno dedicado íntegramente a las citocinas. Otra importante novedad de esta nueva edición es la iconografía; ya que cada una de las imágenes de la edición anterior ha sido revisada. Se ha utilizado otro software para el tratamiento de la imagen en la que se ha potenciado el uso de la vista tridimensional y, por otro lado, se ha modificado el sistema de etiquetaje con el fin de ofrecer la información de la forma más clara y a la vez atractiva visualmente. A parte, se han incorporado un gran número de imágenes, haciendo de esta nueva edición un material altamente didáctico y de gran rigurosidad científica. Cada uno de los capítulos se inicia con un índice de los puntos que se van a tratar, y que se enmarcan en un cuadro de texto diferenciado del resto, y al final del mismo, e igualmente en un recuadro de texto diferenciado del resto, un listado resumen de los conceptos más relevantes. Posteriormente, se ofrece un listado de lecturas recomendadas, agrupadas temáticamente. La nueva edición incorpora el recurso online en inglés StudentConsult cuyos contenidos se detallan a continuación: Todas las imágenes del libro. Un banco de 100 preguntas de autoevaluación. Se trata de preguntas cortas con 5 opciones de respuesta y con un breve razonamiento de la respuesta correcta. Los 4 apéndices del libro impreso en formato pdf. Un total de 20 animaciones de distintos procesos. Las animaciones duran menos de 1 minuto y son muy didácticas porque a parte de los rótulos que van surgiendo, aparece el texto explicativo en un recuadro, separado de las imágenes.

**Kuby Immunology** Jenni Punt, Sharon Stranford, Patricia Jones, Judy Owen. 2018-10-16 Janis Kuby's groundbreaking introduction to immunology was the first textbook for the course actually written to be a textbook. Like no other text, it combined an experimental emphasis with extensive pedagogical features to help students grasp basic concepts. Now in a thoroughly updated new edition, Kuby Immunology remains the only undergraduate introduction to immunology written by teachers of the course. In the Kuby tradition, authors Jenni Punt, Sharon Stranford, Patricia Jones, and Judy Owen present the most current topics in an experimental context, conveying the excitement of scientific discovery, and highlight important advances, but do so with the focus on the big picture of the study of immune response, enhanced by unsurpassed pedagogical support for the first-time learner. Punt, Stranford, Jones, and Owen bring an enormous range of teaching and research experiences to the text, as well as a dedication to continue the experiment-based, pedagogical-driven approach of Janis Kuby. For this edition, they have worked chapter by chapter to streamline the coverage, to address topics that students have the most trouble grasping, and to continually remind students where the topic at hand fits in the study of immunology as a whole.
