Popular Medicinal Plants in Portland and Kingston, Jamaica Ina Vandebroek, David Picking. 2020-12-05 This book highlights the results from over a year of ethnobotanical research in a rural and an urban community in Jamaica, where we interviewed more than 100 people who use medicinal plants for healthcare. The goal of this research was to better understand patterns of medicinal plant knowledge, and to find out which plants are used in consensus by local people for a variety of illnesses. For this book, we selected 25 popular medicinal plant species mentioned during fieldwork. Through individual interviews, we were able to rank plants according to their frequency of mention, and categorized the medicinal uses for each species as “major” (mentioned by more than 20% of people in a community) or “minor” (mentioned by more than 5%, but less than 20% of people). Botanical identification of plant specimens collected in the wild allowed for cross-linking of common and scientific plant names. To supplement field research, we undertook a comprehensive search and review of the ethnobotanical and biomedical literature. Our book summarizes all this information in detail under specific sub-headings.

Saving Normal Allen Frances, M.D..2013-05-14 From the most powerful psychiatrist in America (New York Times) and the man who wrote the book on mental illness (Wired), a deeply fascinating and urgently important critique of the widespread medicalization of normality Anyone living a full, rich life experiences ups and downs, stresses, disappointments, sorrows, and setbacks. These challenges are a normal part of being human, and they should not be treated as psychiatric disease. However, today millions of people who are really no more than worried well are being diagnosed as having a mental disorder and are receiving unnecessary treatment. In Saving Normal, Allen Frances, one of the world's most influential psychiatrists, warns that mislabeling everyday problems as mental illness has shocking implications for individuals and society: stigmatizing a healthy person as mentally ill leads to unnecessary, harmful medications, the narrowing of horizons, misallocation of medical resources, and draining of the budgets of families and the nation. We also shift responsibility for our mental well-being away from our own naturally resilient and self-healing brains, which have kept us sane for hundreds of thousands of years, and into the hands of Big Pharma, who are reaping multi-billion-dollar profits. Frances cautions that the new edition of the bible of psychiatry, the Diagnostic and Statistical Manual of Mental Disorders-5 (DSM-5), will turn our current diagnostic inflation into hyperinflation by converting millions of normal people into mental patients. Alarming, in DSM-5, normal grief will become Major Depressive Disorder; the forgetting seen in old age is Mild Neurocognitive Disorder; temper tantrums are Disruptive Mood Dysregulation Disorder; worrying about a medical illness is Somatic Symptom Disorder; gluttony is Binge Eating Disorder; and most of us will qualify for adult Attention Deficit Disorder. What's more, all of these newly invented conditions will worsen the cruel paradox of the mental health industry: those who desperately need psychiatric help are left shamefully neglected, while the worried well are given the bulk of the treatment, often at their own detriment. Masterfully charting the history of psychiatric fads throughout history, Frances argues that whenever we arbitrarily label another aspect of the human condition a disease, we further chip away at our human adaptability and diversity, dulling the full palette of what is normal and losing something fundamental of ourselves in the process. Saving Normal is a call to all of us to reclaim the full measure of our humanity.
