Enforcing International Maritime Legislation on Air Pollution through UNCLOS Jesper Jarl Fanø.2019-12-26 This book explores the scope and applicability of the United Nations Convention on the Law of the Sea (UNCLOS), relating to the enforcement of international maritime legislation on air pollution. It focuses on enforcement of Annex VI of the International Convention for the Prevention of Pollution from Ships (MARPOL Annex VI) and the strengthened global sulphur limit which comes into force in 2020. The first chapters in Part I provide an overall introduction to relevant regulations of MARPOL Annex VI, UNCLOS, Port State Control (PSC), the EU Sulphur Directive and basic jurisdictional principles of international law. Part II analyses the amplified enforcement and notifying obligations of UNCLOS chapter XII placed on flag States and the broadened jurisdictions for port and coastal States to enforce. This includes extraterritorial enforcement by port States on the high seas and how overlapping jurisdictions are resolved. These theoretical discussions on jurisdiction are tied to practical applications pertaining to PSC and sanctioning. Part III builds upon the conclusions of Part II in relation to the enforcement of other legislation adopted by the International Maritime Organization (IMO), including regulations on Greenhouse Gases (GHG) which the IMO is set to adopt through its GHG Strategy. Finally, with the increased environmental challenges relating to global warming, and given the special legal status of ships, Part IV offers an analysis of whether specific IMO regulations on GHG could, in the future, be considered peremptory norms of a 'jus cogens' character, and addresses the potential legal implications.

Shipboard Power Systems Design and Verification Fundamentals Mohammed M. Islam.2018-06-11 The only book that covers fundamental shipboard design and verification concepts from individual devices to the system level Shipboard electrical system design and development requirements are fundamentally different from utility-based power generation and distribution requirements. Electrical engineers who are engaged in shipbuilding must understand various design elements to build both safe and energy-efficient power distribution systems. This book covers all the relevant technologies and regulations for building shipboard power systems, which include commercial ships, naval ships, offshore floating platforms, and offshore support vessels. In recent years, offshore floating platforms have been frequently discussed in exploring deep-water resources such as oil, gas, and wind energy. This book presents step-by-step shipboard electrical system design and verification fundamentals and provides information on individual electrical devices and practical design examples, along with ample illustrations to back them. In addition, Shipboard Power Systems Design and Verification Fundamentals: Presents real-world examples and supporting drawings for shipboard electrical system design Includes comprehensive coverage of domestic and international rules and regulations (e.g. IEEE 45, IEEE 1580) Covers advanced devices such as VFD (Variable Frequency Drive) in detail This book is an important read for all electrical system engineers working for shipbuilders and shipbuilding subcontractors, as well as for power engineers in general.

The Dynamics of Short Sea Shipping Stratos Papadimitriou,Dimitrios V. Lyridis,Ioannis G. Koliouis,Vangelis Tsioumas,Eleftherios Sdoukopoulos,Peter J. Stavroulakis.2018-11-19 This book belongs to the Port Economics and Global Supply Chain Management strand of the Palgrave Studies in Maritime Economics book series, commissioned by Hercules Haralambides. This book discusses the main drivers that affect the introduction and growth of short sea shipping services. It describes and analyses the main operational concepts of short sea shipping and introduces relevant administrative and strategic approaches that enable its sustainable execution. Short Sea Shipping (SSS) comprises freight and passenger mobility by waterborne transport at a limited range, without crossing an ocean. Being a direct competitor to land-based transport modes, it uses ports and inland waterways to complement traditional transportation systems, increase capacity, improve flexibility, and contribute towards the goal of sustainable mobility. The reader will be introduced to various aspects of short sea shipping including benefits and shortfalls, relevant regulations and policies, and the applicability of short sea services within a given case or scenario.

Technology and Science for the Ships of the Future A. Marinò,V. Bucci.2018-06-22 In 1974, a scientific conference covering marine automation group and large vessels issues was organized under the patronage of the Technical Naval Studies Centre (CETENA) and the Italian National Research Council (CNR). A later collaboration with the Marine Technical Association (ATENA) led to the renaming of the conference as NAV, extending the topics covered to the technical field previously covered by ATENA national conferences. The NAV conference is now held every 3 years, and attracts specialists from all over the world. This book presents the proceedings of NAV 2018, held in Trieste, Italy, in June 2018. The book contains 70 scientific papers, 35 technical papers and 16 reviews, and subjects covered include: comfort on board; conceptual and practical ship design; deep sea mining and marine robotics; protection of the environment; renewable marine energy; design and engineering of offshore vessels; digitalization, unmanned vehicles and cyber security; yacht and pleasure craft design and inland waterway vessels. With its comprehensive coverage of scientific and technical maritime issues, the book will be of interest to all those involved in this important industry.
