Tacky Rax King. 2021-11-02 An irreverent and charming collection of deeply personal essays about the joys of low pop culture and bad taste, exploring coming of age in the 2000s in the age of Hot Topic, Creed, and frosted lip gloss—from the James Beard Award-nominated writer of the Catapult column *Store-Bought Is Fine*—Tacky is about the power of pop culture—like any art—to imprint itself on our lives and shape our experiences, no matter one's commitment to good taste. These fourteen essays are a nostalgia-soaked antidote to the millennial generation's obsession with irony, putting the aesthetics we hate to love—snakeskin pants, *Sex and the City*, Cheesecake Factory's gargantuan menu—into kinder and sharper perspective. Each essay revolves around a different maligned (and yet, Rax would argue, vital) cultural artifact, providing thoughtful, even romantic meditations on desire, love, and the power of nostalgia. An essay about the gym-tan-laundry exuberance of Jersey Shore morphs into an excavation of grief over the death of her father; in *You Wanna Be On Top*, Rax writes about friendship and early aughts girlhood; in another, Guy Fieri helps her heal from an abusive relationship. The result is a collection that captures the personal and generational experience of finding joy in caring just a little too much with clarity, heartfelt honesty, and Rax King's trademark humor. Shooting the Heart Paul Cody. 2004 I can think of no one else who writes with Cody's combination of savagery and tenderness, or who displays such a translucent style to such reverberant effect. --Brian Hall, *I Should Be Extremely Happy in Your Company*.

Handbook of Economic Sociology for the 21st Century Andrea Maurer. 2021-05-08 This handbook provides an overview on major developments that occurred in the field of economic sociology after its rebirth since the 1980s in the US. It offers new insights on the uniqueness of European economic sociology compared to US economic sociology which emerged at the end of the 20th century. The handbook presents economic sociology as a developing field which started with certain foundations as new economic sociology, widening the perspective by introducing social factors thereby focusing more on general belief systems, social forms of coordination and the relationships between society and the economy. It offers an outstanding portrait of the research field helping to identify major foundations and trajectories as well as new research perspectives for a globalized economic sociology. This makes the handbook appeal to specialized researchers of the field, researchers from other disciplines interested in economic phenomena, as well as graduate and postgraduate students.

Mathematical Methods in Physics Philippe Blanchard, Erwin Bruening. 2002-10-04 Physics has long been regarded as a wellspring of mathematical problems. *Mathematical Methods in Physics* is a self-contained presentation, driven by historic motivations, excellent examples, detailed proofs, and a focus on those parts of mathematics that are needed in more ambitious courses on quantum mechanics and classical and quantum field theory. Aimed primarily at a broad community of graduate students in mathematics, mathematical physics, physics and engineering, as well as researchers in these disciplines.

Sounds and the City B. Lashua,K. Spracklen,S. Wagg.2014-05-27 This book explores the ways in which Western-derived music connects with globalization, hybridity, consumerism and the flow of cultures. Both as local terrain and as global crossroads, cities remain fascinating spaces of cultural contestation and meaning-making via the composing, playing, recording and consumption of popular music.

Why Calories Count Marion Nestle,Malden Nesheim.2012-04-18 Calories—too few or too many—are the source of health problems affecting billions of people in today's globalized world. Although calories are essential to human health and survival, they cannot be seen, smelled, or tasted. They are also hard to understand. In *Why Calories Count*, Marion Nestle and Malden Nesheim explain in clear and accessible language what calories are and how they work, both biologically and politically. As they take readers through the issues that are fundamental to our understanding of diet and food, weight gain, loss, and obesity, Nestle and Nesheim sort through a great deal of the misinformation put forth by food manufacturers and diet program promoters. They elucidate the political stakes and show how federal and corporate policies have come together to create an eat more environment. Finally, having armed readers with the necessary information to interpret food labels, evaluate diet claims, and understand evidence as presented in popular media, the authors offer some candid advice: Get organized. Eat less. Eat better. Move more. Get political.

The Austrian School of Economics Eugen-Maria Schulak,Herbert Unterköfler.2011-02 The Austrian School of Economics was founded by Carl Menger in Vienna during the last third of the nineteenth century. From that time until today, its vibrant teaching tradition has had a significant influence on the formation and further development of the modern social sciences and economics in Europe and the United States. Its research agenda was characterized by an astonishing multitude of diverse, and in some cases even contradictory, conclusions. All branches of the school shared the conviction that the subjective feelings and actions of the individual are those which drive economic activity. Based on this conviction, explanations for economic phenomena such as value, exchange, price, interest, and entrepreneurial profit were derived, and step by step expanded into a comprehensive theory of money and business cycles. Because of their subjectivist-individualistic approach, economists of the Austrian School regarded any kind of collective as unscientific in rationale. This led to fierce arguments with the Marxists, the German Historical School, and later with the promoters of planned economy and state interventionism. In the modern Austrian School of Economics, questions regarding knowledge, monetary theory, entrepreneurship, the market process, and spontaneous order placed themselves in the foreground. This book endeavors to trace the development of this multifaceted tradition, with all of its ideas, personalities, and institutions.

Laminations and Foliations in Dynamics, Geometry and Topology Mikhail Lyubich,John Willard Milnor.2001 This volume is based on a conference held at SUNY, Stony Brook (NY). The concepts of laminations and foliations appear in a diverse number of fields, such as topology, geometry, analytic differential equations, holomorphic dynamics, and renormalization theory. Although these areas have developed deep relations, each has developed

distinct research fields with little interaction among practitioners. The conference brought together the diverse points of view of researchers from different areas. This book includes surveys and research papers reflecting the broad spectrum of themes presented at the event. Of particular interest are the articles by F. Bonahon, Geodesic Laminations on Surfaces, and D. Gabai, Three Lectures on Foliations and Laminations on 3-manifolds, which are based on minicourses that took place during the conference.

The Cambridge Companion to James Joyce Derek Attridge.2004-06-17 This second edition of The Cambridge Companion to Joyce contains several revised essays, reflecting increasing emphasis on Joyce's politics, a fresh sense of the importance of his engagement with Ireland, and the changes wrought by gender studies on criticism of his work. This Companion gathers an international team of leading scholars who shed light on Joyce's work and life. The contributions are informative, stimulating and full of rich and accessible insights which will provoke thought and discussion in and out of the classroom. The Companion's reading lists and extended bibliography offer readers the necessary tools for further informed exploration of Joyce studies. This volume is designed primarily as a students' reference work (although it is organised so that it can also be read from cover to cover), and will deepen and extend the enjoyment and understanding of Joyce for the new reader.

Electrodynamics William Baylis.2004-01-12 The emphasis in this text is on classical electromagnetic theory and electrodynamics, that is, dynamical solutions to the Lorentz-force and Maxwell's equations. The natural appearance of the Minkowski spacetime metric in the paravector space of Clifford's geometric algebra is used to formulate a covariant treatment in special relativity that seamlessly connects spacetime concepts to the spatial vector treatments common in undergraduate texts. Baylis' geometrical interpretation, using such powerful tools as spinors and projectors, essentially allows a component-free notation and avoids the clutter of indices required in tensorial treatments. The exposition is clear and progresses systematically - from a discussion of electromagnetic units and an explanation of how the SI system can be readily converted to the Gaussian or natural Heaviside-Lorentz systems, to an introduction of geometric algebra and the paravector model of spacetime, and finally, special relativity. Other topics include Maxwell's equation(s), the Lorentz-force law, the Fresnel equations, electromagnetic waves and polarization, wave guides, radiation from accelerating charges and time-dependent currents, the Liénard-Wiechert potentials, and radiation reaction, all of which benefit from the modern relativistic approach. Numerous worked examples and exercises dispersed throughout the text help the reader understand new concepts and facilitate self-study of the material. Each chapter concludes with a set of problems, many with answers. Complete solutions are also available. An excellent feature is the integration of Maple into the text, thereby facilitating difficult calculations. Operator Theoretical Methods Aurelian Gheondea,Radu-Nicolae Gologan,Dan Timotin.2000 This volume contains carefully selected contributions by participants at the Seventeenth International Conference on Operator Theory held at the University of Timisoara (Romania). A large variety of topics are covered, including single operator theory, C^* -algebras, spectral theory, special classes of concrete operators, and holomorphic operator functions. The book also includes applications in other areas of mathematics and science.

while presenting an argument for a radical reappraisal. The essays, which make up the first part of the book, begin with Leon Botstein's inquiry into the reception of Dvorák's work in German-speaking Europe, in England, and in America. Commenting on the relationship between Dvorák and Brahms, David Beveridge offers the first detailed portrait of perhaps the most interesting artistic friendship of the era. Joseph Horowitz explores the context in which the New World Symphony was premiered a century ago, offering an absorbing account of New York musical life at that time. In discussing Dvorák as a composer of operas, Jan Smaczny provides an unexpected slant on the widely held view of him as a nationalist composer. Michael Beckerman further investigates this view of Dvorák by raising the question of the role nationalism played in music of the nineteenth century. The second part of this volume presents Dvorák's correspondence and reminiscences as well as unpublished reviews and criticism from the Czech press. It includes a series of documents from the composer's American years, a translation of the review of Rusalka's premiere with the photographs that accompanied the article, and Janáček's analyses of the symphonic poems. Many of these documents are published in English for the first time.

Impersonality Sharon Cameron. 2009-11-15 Philosophers have long debated the subjects of person and personhood. Sharon Cameron ushers this debate into the literary realm by considering impersonality in the works of major American writers and figures of international modernism—writers for whom personal identity is inconsequential and even imaginary. In essays on William Empson, Jonathan Edwards, Ralph Waldo Emerson, Herman Melville, T. S. Eliot, and Simone Weil, Cameron examines the impulse to hollow out the core of human distinctiveness, to construct a voice that is no one's voice, to fashion a character without meaningful attributes, a being that is virtually anonymous. "To consent to being anonymous," Weil wrote, "is to bear witness to the truth. But how is this compatible with social life and its labels?" Throughout these essays Cameron examines the friction, even violence, set in motion from such incompatibility—from a "truth" that has no social foundation. Impersonality investigates the uncompromising nature of writing that suspends, eclipses, and even destroys the person as a social, political, or individual entity, of writing that engages with personal identity at the moment when its usual markers vanish or dissolve.

Work in Tropical Forests Siegfried Lewark. 2022-01-31 This book presents a synopsis, with an innovative approach, of abundance, types and conditions of work performed in the tropical plantation and natural forests. It covers work of formally and informally employed, and of own-account small-scale forest users, women and children. Activities in tree harvesting are analyzed, also on-site conversion by pitsawing, planting and pruning. The abilities of the workers and their efforts while fulfilling their tasks, resulting in performance and workload, are described with many examples of published studies. Influencing variables from organizational, technical and managerial sides are considered as much as included in the studies. The detailed descriptions demonstrate the methodical state of ergonomic research. For better understanding of the coverage the background of the development of forest work science is described. The lasting influence of Taylorism and the roles of ILO and FAO as well as NGOs, e.g. in certification, are pointed out.
