Conception entre science et art Jacques Perrin.2001 La différence majeure entre les sciences fondamentales et les sciences de l'ingénieur tient au fait que les finalités de ces dernières sont la conception et la réalisation concrète d'objectifs. Pourtant, si les formations d'ingénieur ont beaucoup évolué depuis les dernières décennies et que les formalisations mathématiques et les analyses technologiques y ont pris une place prépondérante, la formation à la conception a régressé, à tel point que les élèves ingénieurs peinent aujourd'hui à utiliser leurs connaissances pour concevoir de nouveaux composés, procédés ou systèmes. L'ambition de cet ouvrage est d'apporter une contribution au repérage et à la définition de pistes de prospection. Il met en lumière la double caractéristique de la démarche de conception, reposant autant sur la rigueur et le raisonnement scientifique que l'imaginaire et la créativité, et située à l'exacte croisée des chemins de la science et de l'art. Cet ouvrage intéressera en particulier les épistémologues et tous ceux faisant de la question de la conception l'objet de leur réflexion ou de leur action.

Conception et calcul des machines-outils François Pruvot.1993 La plupart des machines-outils travaillant par enlèvement de copeaux utilisent des broches. Toutes les broches, de toutes les machines d'usinage, ont la même fonction et ressortissent de la même technique et des mêmes

technologies. On peut alors donner une définition unique (au sens physique, pas au sens fonctionnel) des broches: une broche est un arbre à une extrémité duquel on peut fixer un outil ou une pièce à usiner et auquel des paliers retirent cinq degrés de liberté; le sixième - le dernier restant - correspondant à une rotation d'angle et de vitesse indéfinis autour de l'axe de révolution de la broche; il est enlevé, ainsi que nous l'avons vu dans le premier volume, par la transmission de puissance. Toutes les broches ont donc, à de faibles différences près, la même structure et la même composition. Il est donc possible de bâtir un modèle grâce auquel les comportements statique et dynamique pourront être étudiés. Pour l'étude cinématique, la compréhension de certains aspects du fonctionnement des paliers est nécessaire. L'étude commence par une analyse de l'existant, donc de broches réelles. Leurs caractéristiques sont mises en évidence et toutes les particularités de leur fonctionnement sont chiffrées. Cela mène le lecteur à la synthèse, à la création, voir à l'invention de nouvelles broches.[Source : 4e de couv.]

5th International Conference on Digital Enterprise Technology Alain Bernard. 2010 Digital Enterprise Technology (DET) is more than a concept. Companies are facing new challenges in a context where the references are mostly numerical. Nowadays, digital methods and tools are widely generalized. DET 2008 allowed excellent exchanges about the collection of systems and methods for the digital modelling and analysis of the global product development and realisation process, in the context of lifecycle management. This book of proceedings gives a short version of the keynotes and proposes the text of the papers that have been presented during DET 2008. This gives a clear view of the actual state of the art and of the industrial needs. This book of proceedings is organized with respect to the topics that were addressed during the conference.

Le système technologique contemporain Smaïl Aït-El-Hadj.2018-01-01 La série Smart innovation présente les thèmes liés à la dynamique technologique, entrepreneuriale, territoriale et économique de l'innovation. Elle privilégie les approches novatrices des acteurs qui, par leurs comportements, stratégies et politiques d'innovation intelligente, modifient les modèles économiques dans une perspective de croissance durable. Le haut niveau d'innovation qui transforme actuellement notre monde et la puissante dynamique technologique qui le porte peuvent être vus comme la seconde vague d'innovation d'un troisième système technologique qui a émergé à la fin des années 1970. Cet ouvrage présente le concept de système technologique et se concentre sur les outils permettant de formaliser l'organisation technologique de la société et de modéliser sa dynamique d'évolution. Ainsi, il examine ce dispositif dans une perspective historique afin d'analyser le processus de succession des systèmes technologiques depuis la période préindustrielle. Ces outils vont surtout être utilisés pour caractériser le système technologique contemporain et pour modéliser sa dynamique d'innovation spécifique.

Bocquet,David Davidson.2012-12-06 This volume contains the selected papers of the first I.D.M.M.E. conference on 'Integrated Design and Manufacturing in Mechanical Engineering', held in Nantes

from 15-17 April 1996. Its objective was to discuss the questions related to the definition of the optimal design and manufacturing processes and to their integration through coherent methodologies in adapted environments. The initiative of the Conference and the organization thereof, is mainly due to the efforts of the french PRIMECA group (Pool of Computer Resources for Mechanics) started eight years ago. We were able to attract the international community with the support of the International Institution for Production Engineering Research (C.I.R.P.). The conference brought together two hundred and fifty specialists from around the world. About ninety papers and twenty posters were presented covering three main topics : optimization and evaluation of the product design process, optimization and evaluation of the manufacturing systems and methodological aspects.

Britain, France and the Decolonization of Africa Andrew W.M. Smith,Chris

Jeppesen.2017-03-01 Looking at decolonization in the conditional tense, this volume teases out the complex and uncertain ends of British and French empire in Africa during the period of 'late colonial shift' after 1945. Rather than view decolonization as an inevitable process, the contributors together explore the crucial historical moments in which change was negotiated, compromises were made, and debates were staged. Three core themes guide the analysis: development, contingency and entanglement. The chapters consider the ways in which decolonization was governed and moderated by concerns about development and profit. A complementary focus on contingency allows deeper consideration of how colonial powers planned for 'colonial futures', and how divergent voices greeted the end of empire. Thinking about entanglements likewise stresses both the connections that existed between the British and French empires in Africa, and those that endured beyond the formal transfer of power.
