Biology Peter Hamilton Raven,Kenneth A. Mason,George Brooks Johnson,Jonathan B. Losos,Susan R.. Singer.2011 Committed to Excellence. This edition continues the evolution of Raven & Johnson's *Biology*. The author team is committed to continually improving the text, keeping the student and learning foremost. We have integrated new pedagogical features to guide the student through the learning process. This latest edition of the text maintains the clear, accessible, and engaging writing style of past editions with the solid framework of pedagogy that highlights an emphasis on evolution and scientific inquiry that have made this a leading textbook for students majoring in biology. This emphasis on the organizing power of evolution is combined with an integration of the importance of cellular, molecular biology and genomics to offer our readers a text that is student friendly and current. Our author team is committed to producing the best possible text for both student and faculty. The lead author, Kenneth Mason, University of Iowa, has taught majors biology at three different major public universities for more than fifteen years. Jonathan Losos, Harvard University, is at the cutting edge of evolutionary biology research, and Susan Singer, Carleton College, has been involved in science education policy issues on a national level.

Concepts in Biology Eldon Enger,Frederick C. Ross.2002-06 The exercises comprising this laboratory manual are intended to supplement the text *Concepts in Biology*, but they can be used with any introductory-level biology text. Laboratory exercises begin with a list of safety issues that

students need to be aware of. These items identify caustic chemicals, equipment that needs special care or handling, and health or safety hazards a careless student may encounter. We suggest that students use the laboratory manual as a workbook and record data and answers to questions in the spaces provided. The laboratory gives students the opportunity to get involved in biology. They go beyond reading and studying and actually enter into the process of doing science.

Concepts in Biology Laboratory Manual Eldon D. Enger, Frederick C. Ross. 2004-01 *Concepts in Biology* is a short, student-friendly text organized in a traditional manner. It has very little botany and presents a human-oriented approach to the animal unit. Professors and students appreciate the low cost of this title, and that it is written for students who are not biology majors.
