Paris and the Parasite Macs Smith.2021-06-08 The social consequences of anti-parasitic urbanism, as efforts to expunge supposedly biological parasites penalize those viewed as social parasites. According to French philosopher Michel Serres, ordered systems are founded on the pathologization of parasites, which can never be fully expelled. In *Paris and the Parasite*, Macs Smith extends Serres's approach to Paris as a mediatic city, asking what organisms, people, and forms of interference constitute its parasites. Drawing on French poststructuralist theory and philosophy, media theory, the philosophy of science, and an array of literary and cultural sources, he examines Paris and its parasites from the early nineteenth century to today, focusing on the contemporary city. In so doing, he reveals the social consequences of anti-parasitic urbanism.

Theatre and Boxing Franco Ruffini.2023-08-25 *Theatre and Boxing* focuses on a problem which is of paramount importance for any theatre practitioner and researcher: the actor's believable body. This problem has been taken up by Stanislavski, Meyerhold, Artaud, Brecht, Decroux, Copeau, Grotowski, and many others. It is an essential hurdle for all who practice the theatrical craft or want to study it theoretically. This hurdle can be considered one of the foundations of theatre science and of the relationship between technique, politics and ethics. This book tells the story of a revolution in the work of the actor in the early- and mid-20th century, a period in which the focus of theatrical interest shifted from the emotions to the body. The actor's body became a tool for purveying a dynamic set of actions which often transformed the very actor himself. This new centrality of the body also drew

attention to those places in which the body is central: the gym, the boxing ring and the circus with its trapezes and tightropes became, together with the stage, laboratories for the theatre. Thus, in addition to the reformers of the theatre the pages of this book are filled with boxers, acrobats, gymnasts and wrestlers, pursuers of an utopia: the actor who flies.

The SAGE Encyclopedia of Action Research David Coghlan, Mary Brydon-Miller. 2014-08-11 Action research is a term used to describe a family of related approaches that integrate theory and action with a goal of addressing important organizational, community, and social issues together with those who experience them. It focuses on the creation of areas for collaborative learning and the design, enactment and evaluation of liberating actions through combining action and research, reflection and action in an ongoing cycle of cogenerative knowledge. While the roots of these methodologies go back to the 1940s, there has been a dramatic increase in research output and adoption in university curricula over the past decade. This is now an area of high popularity among academics and researchers from various fields—especially business and organization studies, education, health care, nursing, development studies, and social and community work. The SAGE Encyclopedia of Action Research brings together the many strands of action research and addresses the interplay between these disciplines by presenting a state-of-the-art overview and comprehensive breakdown of the key tenets and methods of action research as well as detailing the work of key theorists and contributors to action research. To watch a video of editor David Coghlan discuss the importance of this major reference work as well as the implications, challenges and successes of editing *The SAGE Encyclopedia of Action*

Performer Training for Actors and Athletes Frank

Camilleri.2023-06-15 What goes on in the body and mind of an endurance athlete at the limits of performance? How do they relate to the world around and prepare for the task ahead? Offering a refreshing perspective on training in the cross-lighting of aesthetic and athletic processes, this book focuses on the learning, mastery and creative adaptation of technique in performance. From traditional and physical actors to runners, boxers and other sports practitioners, it is about performers: their bodies, trainings and experiences. It interrogates what it means to prepare and train as a performer in the early 21st century. Writing from extensive experience in physical theatre and long-distance running, the author combines insights from both disciplines along with theatre history, sports science and perspectives like embodied cognition and affective science. From the kind of thoughts that go through the mind of an actor or a runner, to the economy and aesthetic of their movement and to how they feel about it, this book sheds light on the performing body and its capacities for action. Topics covered include attentional focus and distraction, affordances and equipment, 'choking' and stage fright, physiological regulation and effort perception, pacing and play, optimal flow and creative improvisation, and intentionality and automaticity in expert performance. The volume presents an informative and thought-provoking account accessible to readers interested in theatre, dance, performance, running, athletics, and sport.

The Natural Method Georges Hébert.2015-08-12 Once the fundamentals are learned, applied and practiced, the next step is the application and development of skills related to marching, running, jumping, climbing, throwing, lifting, even fighting and swimming to become well-rounded physically, to be able to rescue, protect and generally perform. The difficulty of exercises varies greatly in this installment, so that novice and advanced

athletes will each find beneficial aspects for their individual training needs.

Routledge Handbook of Urban Public Space Karen A. Franck,Te-Sheng Huang.2023-03-20 Is it truly the end of public space? This handbook presents evidence that the answer is no. In cities in different parts of the world, people still use public space to pursue activities of their choice. The book is divided into seven sections. The first section presents three emerging types of public space. Each of the subsequent five sections focuses on a type of activity: recreation, commerce, protest, living and celebration. These sections are international in scope, presenting cases of activities in Brazil, China, Colombia, DR Congo, Egypt, Finland, Germany, Libya, Taiwan, Turkey and the U.S. The closing section, composed of three chapters, presents research methods for studying public space. Graduate students, faculty members and researchers in social science, architecture, landscape architecture, geography and urban design will find the book useful for understanding, studying and designing urban public space.

Practical Guide to Simulation in Delivery Room Emergencies

Gilda Cinnella, Renata Beck, Antonio Malvasi. 2023-07-15 In this book the use of hybrid simulation in delivery room emergencies is described and shown. The use of a patient actor combined with a task trainer within the same session substantially improve the training for practical management of intrapartum emergencies in real life, reducing the risk of failure of operative vaginal delivery and of related adverse events, including perinatal or maternal complications. Furthermore, simulation with high reality computerized mannequin and scenography of emergency situation can improve technical and manual skills of the participants. For this book and the related videos, a new generation of mannequins suitable for both clinical manoeuvres and ultrasound examination is used to simulate all clinical scenarios of emergency that can happen in the delivery room for

both the mother and the child. This unique book is a useful tool for medical students, residents, practicing pediatricians, anesthetists, obstetricians and all health care professionals working in the delivery room in their ability to deal with critical and emergency situations with safety and good medical practice.

Women's Physical Education Georges Hébert. 2016-04-18 A historical perspective on women's fitness, the representation of the body in art through the ages, as well as societal views shaped the perception and appreciation of the woman's body. In this book Hebert discusses integral physical development and how it is achieved through the trifecta of health, strength and esthetic beauty. He breaks everything down through the analysis of various sections of the body, as well as references to Ancient Greece and warrior women, comparing the so-called civilized unhealthy societies vs natural, more primitive cultures not affected by certain fashions or trends.

The Sciences of the Artificial, reissue of the third edition with a new introduction by John Laird Herbert A.

Simon.2019-08-13 Herbert Simon's classic work on artificial intelligence in the expanded and updated third edition from 1996, with a new introduction by John E. Laird. Herbert Simon's classic and influential *The Sciences of the Artificial* declares definitively that there can be a science not only of natural phenomena but also of what is artificial. Exploring the commonalities of artificial systems, including economic systems, the business firm, artificial intelligence, complex engineering projects, and social plans, Simon argues that designed systems are a valid field of study, and he proposes a science of design. For this third edition, originally published in 1996, Simon added new material that takes into account advances in cognitive psychology and the science of design while confirming and extending the book's basic thesis: that a physical symbol system has the necessary and sufficient means for intelligent action. Simon won the Nobel Prize for Economics in 1978 for his research into the decision-making process within economic organizations and the Turing Award (considered by some the computer science equivalent to the Nobel) with Allen Newell in 1975 for contributions to artificial intelligence, the psychology of human cognition, and list processing. *The Sciences of the Artificial* distills the essence of Simon's thought accessibly and coherently. This reissue of the

third edition makes a pioneering work available to a new audience.

A History of Economic Theory and Method Robert B. Ekelund, Jr., Robert F. Hébert.2006-11-27 Economics, as intellectual discourse, is not a settled body of principles; it is a heterogeneous discipline with numerous traditions, each based on a cluster of theories. Ekelund and Hébert, experienced researchers and educators, balance continuity and consensus in the evolution of economic theory with alternative points of view about the nature, scope, and method of economic inquiry. Their creative approach gives readers a feel for the thought processes of the great minds in economics and underscores key ideas impacting contemporary thought and practice. Building on the solid foundation of previous editions, the fifth edition of *A History of Economic Theory and Method* presents an updated and expanded examination of the essential theoretical elements of an economy and the numerous institutions that affect market behavior, beginning with the ancient Greeks and ending with the late twentieth century. It features an in-depth interpretation of the transition from classical to neoclassical economic thought, exposes some of the dissident voices raised against classical economic orthodoxy, discusses game theory, takes a close look at the origins of traditional microeconomics, avoids highly technical or graphically complicated material, and examines the advantages and disadvantages of economics achieving a scientific status applying

mathematical and statistical techniques in economic inquiry. Chapters contain boxed material that enrich touchstone ideas or mark procedural disagreements and alternative approaches to economics.

Body Ecology and Emersive Leisure Bernard Andrieu,Jim Parry,Alessandro Porrovecchio,Olivier Sirost.2018-01-19 The emerging field of body ecology offers fresh insights into how the body engages with its surrounding environment through consciousness, perception, knowledge and emotion. In this groundbreaking collection, leading scholars of sport, leisure and philosophy draw on research on topics as diverse as surfing, freediving, slacklining, parkour, bodybuilding, dance and circus

arts to flesh out the concept of body ecology and its potential for helping us understand our connection with the world around us. Touching on theories of subjectivity, embodiment, pleasure and play, this book explores different approaches to studying body ecology as a way of conceptualising the experience of being immersed in nature, in the elements and in one's own body through the power of awareness. An experience becomes immersive when it involves the production of new emotions in the body: immersion is the activation of what is living within the body itself. Shedding new light on the possibilities of physical cultural studies, *Body Ecology and Immersive Leisure* is fascinating reading for all students and scholars with an interest in sport, leisure, philosophy and the body.

Symbolic Interactionism Herbert Blumer.1986 This is a collection of articles dealing with the point of view of symbolic interactionism and with the topic of methodology in the discipline of sociology. It is written by the leading figure in the school of symbolic interactionism, and presents what might be regarded as the most authoritative statement of its point of view, outlining its fundamental premises and sketching their implications for sociological study. Blumer states that symbolic interactionism rests on three premises: that human beings act toward things on the basis of the meanings of things have for them; that the meaning of such things derives from the social interaction one has with one's fellows; and that these meanings are handled in, and modified through, an interpretive process.
