Advanced Materials for Water Handling: Composites and Thermoplastics D.V. Scott.2000-08-18 Rapid evolution is taking place in the water market world wide - driven by increased consumer demand allied to the rarefaction of clean water. The inherent characteristics of composites materials associated with current materials and production technology is allowing the increased use of previously high cost materials and processes at ever decreasing costs. The Handbook is designed to bring specifiers up to speed with these materials and the new areas of application associated with them, exploring the scope, performance, cost effectiveness and environmental and legislative consequences of their use.

PE 100 Pipe Systems Heiner Brömstrup.2004 Because of the considerably increased performance, pipe and pipe systems made from PE (Polyethylen) 100 enlarge the range of applications in the sectors of gas and water supply, sewage disposal, industrial pipeline construction and in the reconstruction and redevelopment of defective pipelines (relining). Just as the first edition this second completely revised edition refers exclusively to pressure pipe systems, from the production of PE 100 high-performance raw material and the manufacture of pipes and fittings up to pipelaying followed by descriptions of pipeline projects realized in Switzerland, Austria, Portugal, Norway and Germany.

Polymer Products D. Morton-Jones.2012-12-06 This book is derived from a recent project sponsored by the Polymer Engineering Directorate of the SERC and carried out at the University of Lancaster under the joint auspices of the Departments of Chemistry and Engineering. The project set out to provide a novel type of teaching material for introducing polymers and their uses to students, especially of engineering. Case studies of real examples of polymers at work are used, so the student or teacher can start with a successful and well-designed product and work backwards to its origins in the market, in design and material selection and in the manufacturing process. The philosophy is that such an approach captures interest right at the start by means of a real example and then retains it because of the relevance of the technical explanation. This after all is what most of us do habitually; we turn to examples to make our point. The hope is that subject matter with a somewhat notorious reputation among engineers, such as aspects of polymer chemistry and the non-linear behaviour of polymers under mechanical loading will be fairly painlessly absorbed through the context of the examples. Each study becomes a separate chapter in the book. The original studies, and hence the present chapters, vary in length because different topics demanded different approaches. No attempt has been made to alter this, or to adopt a standardized format because to have done so would have interfered with the vitality of the original work.

District Heating, Thermal Generation and Distribution C. MacKenzie-Kennedy.2014-05-18 District Heating: Thermal Generation and Distribution details the various applications of thermal energy from different sources in providing a centralized generation and distribution of heat services. The title first introduces the general information about the utilization of alternative thermal energy sources, and then proceeds to discussing the creation of thermal energy for distribution. Next, the selection covers the pressurization of sealed systems and generation equipment and techniques. The text also talks about total energy, along with heat distribution. The book will be of great interest to scientists, engineers, and technicians involved in the research, development, and implementation of alternative thermal energy technology.

Handbook on Pressurized Irrigation Techniques Andreas Phocaidis, Food and Agriculture Organization of the United Nations.2007 Increasing the efficiency of water use and enhancing agricultural water productivity at all levels of the production chains are becoming priorities in a growing number of countries. In particular, shifting to modern on-farm irrigation practices can contribute to a substantial increase in both water use efficiency and water productivity. The objective of this handbook is to provide a practical guide on the use of pressurized irrigation techniques to farmers, irrigation technicians, and extension workers in the field. In this second edition, the handbook has been considerably revised, including new chapters on low-cost drip irrigation and pipe distribution systems for smallholders.--Publisher's description.

Fasteners 6 DIN e.V..2012 Die 2. Auflage von DIN Handbook 362 enthält über 60 Europäische Normen (DIN-EN- und DIN-EN-ISO-Normen über Schrauben). Gegenüber der 1. HDPE Geomembranes in Geotechnics Werner W. Müller.2006-11-24 High-density Polyethylene (HDPE) geomembranes are widely used for liners and sealings in geotechnical engineering. Common applications include lining of ponds, dams and dykes, landfill underliners and cover systems, remediation of contaminated sites, waterproofing for tunnels, and beneath highways. This handbook covers all aspects of the field: basic materials, geomembrane manufacture, textured geomembranes, long-term performance and testing, installation and welding of geomembranes, quality assurance and control, leak detection, standards, recommendations and regulations.

The Rehabilitation and Maintenance of Drains and Sewers Dietrich Stein.2001-09-19 This is the shortened, English-language version of the German volume published in 1989 and omits those contributions and passages that refer only to German laws, or which have little relevance outside Germany. It includes additional texts, especially on the relevant European norms and the canon of the Abwassertechnische Vereinigung [German Waste Water Technology Association] as well as the latest research and development reports. The result is a comprehensive overview of the technology currently available for wastewater management and systems plus the relevant norms, with special emphasis on maintenance, cleaning, inspection and reconstruction. A number of European systems are used to describe in detail pipe materials and connections, pipework-specific framework conditions and their changes since the development of modern drains and sewers in the 19th century. The book also lists causes and effects of various types of damage, and their assessment in terms of hydraulics, environmental relevance and construction, since this is a basic prerequisite for the choice of suitable rehabilitation measures and their implementation. Readers are thus not only provided with a comprehensive presentation of all internationally practised rehabilitation processes and their fields of application, but are also given advice on their selection, on the formulation of tenders, cost and cost efficiency.

Fasteners 5 DIN e.V..2018-11-22 This 4th edition of DIN Handbook 193 Fasteners 5 - Basic standards The handbook contains essential standards on fasteners, covering such areas as: countersinks and counterbores // widths across flats // thread run-outs and thread undercuts // bolt and screw ends // stud ends and tapped holes for compression couplings // driving features // tolerances for screw threads // key terminology and definitions for fasteners (with three comprehensive multilingual standards containing terminology in nine languages). Compared to the 3rd edition of this DIN Handbook, three standards have been included for the first time and eleven standards have been revised. DIN Handbook 193 is one of a series of six handbooks on fasteners. DIN Handbook 45 Threads for engineering is the ideal complement to this series.

Valves, Piping, and Pipelines Handbook T. Christopher Dickenson.1999 Hardbound. Over recent years, a number of significant developments in the application of valves have taken place: the increasing use of actuator devices, the introduction of more valve designs capable of reliable operation in difficult fluid handling situations; low noise technology and most importantly, the increasing attention being paid to product safety and reliability. Digital technology is making an impact on this market with manufacturers developing intelligent (smart) control valves incorporating control functions and interfaces. New metallic materials and coatings available make it possible to improve application ranges and reliability. New and improved polymers, plastic composite materials and ceramics are all playing their part. Fibre-reinforced plastic pipe systems, glass-reinforced epoxy pipe systems and the traditional low-cost polyester pipe systems have all undergone sophisticated design and manufacturing technology changes.
