Wine and the Vine Tim Unwin.2005-07-12 Very few books have products as diverse as those of the grape vine: even fewer have products with such a cultural significance. Wine and the Vine provides an introduction to the historical geography of viticulture and the wine trade from prehistory to the present. It considers wine as both a unique expression of the interaction of people in a particular environment, rich in symbol and meaning, and a commercial product of great economic importance to particular regions.

Bioregional Planning and Design: Volume I David Fanfani,Alberto Matarán Ruiz.2020-07-20 This book provides a review of the bioregionalist theory in the field of spatial planning and design as a suitable approach to cope with the growing concerns about the negative effects of metropolization processes and the need for a sustainable transition. The book starts out with a section on rethinking places for community life, and discusses the reframing of regional governance and development as well as social justice in spatial planning. It introduces the concept of the urban bioregion, a pivotal concept that underpins balanced polycentric spatial patterns and supports self-reliant and fair local development. The second part of the book focuses on planning, and particularly on the issues that arise from the ‘circular’ recovery of the relation between city and agro-ecosystems for integrated planning and resilience of settlements and discusses topics such as foodshed planning, biophilic urbanism and the integration of rural development and spatial planning. This volume sets out the reference framework for Volume II which deals with more specific and operational issues related to spatial

policies and settlement design.

Transdisciplinary Research and Practice for Sustainability

Outcomes Dena Fam, Jane Palmer, Chris Riedy, Cynthia Mitchell. 2016-11-10 'Transdisciplinarity' is a form of research and practice that synthesises knowledge from a range of academic disciplines and from the community. There is now global interest and a significant body of work on transdisciplinarity and its potential to address the apparently intractable problems of society. This creates the opportunity for a specific focus on its practical application to sustainability issues. *Transdisciplinary Research and Practice for Sustainability Outcomes* examines the role of transdisciplinarity in the transformations needed for a sustainable world. After an historical overview of transdisciplinarity, Part I focuses on tools and frameworks to achieve sustainability outcomes in practice and Part II consolidates work by a number of scholars on supporting transdisciplinary researchers and practitioners. Part III is a series of case studies including several international examples that demonstrate the challenges and rewards of transdisciplinary work. The concluding chapter proposes a future research pathway for understanding the human factors that underpin successful transdisciplinary research. As Emeritus Professor Valerie Brown AO notes in her Preface, this book moves transdisciplinary inquiry into the academic and social mainstream. It will be of great interest to researchers and practitioners in the fields of sustainability, qualitative research methods, environmental impact assessment and development studies.

Ecodharma David Loy. 2019-01-29 How can we respond urgently and effectively to the ecological crisis—and stay sane doing it? This landmark work is simultaneously a manifesto, a blueprint, a call to action, and a deep comfort for troubling times. David R. Loy masterfully lays out the principles and perspectives of Ecodharma—a Buddhist response to our ecological predicament,

introducing a new term for a new development of the Buddhist tradition. This book emphasizes the three aspects of Ecodharma: practicing in the natural world, exploring the ecological implications of Buddhist teachings, and embodying that understanding in the eco-activism that is needed today. Within these pages, you'll discover the powerful ways Buddhism can inspire us to heal the world we share. Offering a compelling framework and practical spiritual resources, Loy outlines the Ecosattva Path, a path of liberation and salvation for all beings and the world itself.

The United Nations World Water Development Report 2021

.2021-03-22 Water is a finite and non-substitutable resource. As the foundation of life, societies and economies, it carries multiple values and benefits. But unlike most other natural resources, it has proven extremely difficult to determine its true 'value'. The 2021 edition of the United Nations World Water Development Report, titled "Valuing Water" assesses the current status of and challenges to the valuation of water across different sectors and perspectives and identifies ways in which valuation can be promoted as a tool to help improve its management and achieve global sustainable development.

Global Horizons Hendrik Spruyt.2009-03-01 In the current era we have the ability to wage global war, interact economically and culturally with any part of the world, and communicate with each other in real time. Our horizons are now global. Time and space have contracted. This text takes the change in our horizons as a

key feature of modern international relations, examining how international politics and the relations between nations and states have become global politics. Rather than survey a large array of issues and theories, Spruyt provides students with particular tools of the trade and with different perspectives to understand given empirical puzzles. Each section of the book discusses key theories, which may be useful in understanding the issues in question, and then applies them to empirical cases in order to demonstrate how theory relates to practice. Case studies allow for both an historical and comparative approach.

Treadmill of Production Kenneth A. Gould, David N. Pellow, Allan Schnaiberg. 2015-11-17 Schnaiberg's concept of the treadmill of production is arguably the most visible and enduring theory to emerge in three decades of environmental sociology. Elaborated and tested, it has been found to be an accurate predictor of political-economic changes in the global economy. In the global South, it has figures prominently in the work of structural environmental analysts and has been used by many political-economic movements. Building new extensions and applications of the treadmill theory, this new book shows how and why northern analysts and governments have failed to protect our environment and secure our future. Using an empirically based political-economic perspective, the authors outline the causes of environmental degradation, the limits of environmental protection policies, and the failures of institutional decision-makers to protect human well-being.

Climate-Challenged Society John S. Dryzek, Richard B. Norgaard, David Schlosberg. 2013-10-24 This book is an original, accessible, and thought-provoking introduction to the severe and broad-ranging challenges that climate change presents and how societies can respond. It synthesizes and deploys cutting-edge scholarship on the range of social, economic, political, and philosophical issues surrounding climate change. The treatment is introductory, but the book is written with attitude, for nobody

has yet charted in coherent, integrative, and effective fashion a way to move societies beyond their current paralysis as they face the challenges of climate change. The coverage begins with an examination of science, public opinion, and policy making, with special attention to organized climate change denial. The book then moves to economic analysis and its limits; different kinds of policies; climate justice; governance at all levels from the local to the global; and the challenge of an emerging Anthropocene in which the mostly unintended consequences of human action drive the earth system into a more chaotic and unstable era. The conclusion considers the prospects for fundamental transition in ideas, movements, economics, and governance.

Sea-Level Rise and Coastal Subsidence: Causes, Consequences, and Strategies J.D. Milliman, B.U. Haq. 2013-03-09 Greenhouse-induced climate warming increasingly appears to be a reality, and the warming climate will be accompanied by an accelerated sea level rise - as much as 60-100 cm over the next century. What is commonly absent in the discussion of rising sea level, however, is the role played by the subsidence of low-lying coastal areas, which can have a far greater local effect than the eustatic rise of the sea. The combined sea-level rise and land subsidence will almost certainly make the greatest impact on coastal societies in the densely populated regions of southern Asia, but its effects will be felt globally. This volume explores the concepts of sea-level rise and coastal subsidence, both natural and anthropogenically accelerated, in the form of a series of case studies in such diverse locations as Bangkok, Bangladesh, Venice, and the Niger and Mississippi deltas, as well as a discussion of the economic, engineering and policy responses that must be considered if the effects of local sea-level rise are to be mitigated.

The United Nations World Water Development Report 2020

UNESCO. 2020-03-27 The 2020 edition of the WWDR, titled Water and Climate Change illustrates the critical linkages between water and climate change in the context of the broader sustainable development agenda. Supported by examples from across the world, it describes both the challenges and opportunities created by climate change, and provides potential responses - in terms of adaptation, mitigation and improved resilience - that can be undertaken by enhancing water resources management, attenuating water-related risks, and improving access to water supply and sanitation services for all in a sustainable manner. It addresses the interrelations between

water, people, environment and economics in a changing climate, demonstrating how climate change can be a positive catalyst for improved water management, governance and financing to achieve a sustainable and prosperous world for all. The report provides a fact-based, water-focused contribution to the knowledge base on climate change. It is complementary to existing scientific assessments and designed to support international political frameworks, with the goals of helping the water community tackle the challenges of climate change, and informing the climate change community about the opportunities that improved water management offers in terms of adaptation and mitigation.

Wellbeing, Freedom and Social Justice Ingrid

Robeyns.2017-12-11 How do we evaluate ambiguous concepts such as wellbeing, freedom, and social justice? How do we develop policies that offer everyone the best chance to achieve what they want from life? The capability approach, a theoretical framework pioneered by the philosopher and economist Amartya Sen in the 1980s, has become an increasingly influential way to think about these issues. *Wellbeing, Freedom and Social Justice: The Capability Approach Re-Examined* is both an introduction to the capability approach and a thorough evaluation of the challenges and disputes that have engrossed the scholars who have developed it. Ingrid Robeyns offers her own illuminating and rigorously interdisciplinary interpretation, arguing that by appreciating the distinction between the general capability approach and more specific capability theories or applications we can create a powerful and flexible tool for use in a variety of academic disciplines and fields of policymaking. This book provides an original and comprehensive account that will appeal to scholars of the capability approach, new readers looking for an interdisciplinary introduction, and those interested in theories of justice, human rights, basic needs, and the human development approach.

Private Philanthropy for Development Collectif.2018-04-17

Philanthropy's role in advancing sustainable development attracts a lot of attention. This report calls into question long-held assumptions about the volume, nature and potential of foundations' engagement in developing countries, and the role they can play to support the SDGs. It presents ground-breaking data and analysis that capture previously non-existent global and comparable quantitative and qualitative data on how foundations support development. The report examines philanthropic resource flows for development purposes, as well as foundations' priorities, practices and partnering behaviours. It presents fresh perspectives and action-oriented recommendations to optimise philanthropy's role in support of sustainable development. This report offers practical insights for government policy makers and decision makers in civil society organisations, social enterprises and foundations. It results from close co-operation between the OECD Development Centre's Network of Foundations Working for Development (netFWD) and the OECD Development Co-operation Directorate.

The essence of security: reflections in office Robert S. McNamara.1968

Urban Constellations Matthew Gandy.2011 Cities are an unprecedented focus of attention: over half the world now lives in them, culture and politics are shaped by them, and they are also focal points for new relationships between nature, technology and the human body. This essay collection brings together a range of cutting-edge international scholarship on cities, urbanisation and urban culture. The format of the collection is a series of small essays in the spirit of Benjamin, Kracauer and other innovative forms of writing and observation. The collection explores themes such as new forms of political mobilisation, the effects of economic instability, the political ecology of urban nature and the presence of collective memory. Cultural aspects of urban change are also considered including the work of artists, film makers and

others, who have sought to critically engage with processes of urban change. The global scope of the collection includes essays in Berlin, Chicago and London, as well as less extensively studied cities such as Chennai, Jakarta and Lagos.

Urban Fuel Poverty Kristian Fabbri. 2019-07-04 Urban Fuel

Poverty describes key approaches to defining and alleviating fuel poverty in cities using a multidisciplinary perspective and multiple case studies. It provides empirical knowledge on the

levels and intensities of energy poverty in urban areas, along with new theoretical perspectives in conceptualizing the multidimensionality of energy poverty, with special focus given to the urban environment. Chapters discuss what energy poverty is in terms of taxonomy, stakeholders and affected parties, addressing the role of the economy and energy bills, the role of climate and city factors, the role of buildings, and the health and psychological impact on fuel poverty. The book addresses how to measure energy poverty, how to map it, and how to draw conclusions based on illness and social indicators. Finally, it explores measures to 'fight' fuel poverty, including policy and governance actions, building efficiency improvements and city planning. Bridges interdisciplinary divides between policy and economy, cities and buildings, and health and society Addresses the physical performance of urban fuel poverty and their effect on thermal comfort and human health Provides strategies and policies to mitigate energy and fuel poverty

World Social Report 2021 .2021-05-20 The World Social Report 2021 points to new directions in which rural development strategies need to be reconsidered. It offers strategic principles, programs of action, and a set of concrete policies that can be combined to devise effective strategies to help realize the potential of rural development and achieve the SDGs.

Reexamining the narrow view of rural development, it expands the discussion to include the role of development in achieving the wider set of SDGs. In doing so, it pays particular attention to the interaction of rural development with SDG 6 (clean water and sanitation), SDG 8 (economic growth and decent work), SDG 9 (infrastructure), SDG 11 (sustainable communities), SDG 13 (climate change), SDG 14 (life below water) and SDG 15 (life on land). The interlinkages of all these Goals suggest that there exist potential synergies between rural development and sustainable efforts in many other directions.

The Transition Handbook Rob Hopkins. 2008-02-25 Move from feeling anxious about the oil crisis to developing a positive visions and taking traction action to create a more self-reliant existence with this ground-breaking book. We live in an oil-dependent world, and have become reliant in a very short space of time, using vast reserves of oil in the process – and without planning for when the supply is not so plentiful. Most of us avoid thinking about what happens when the oil runs out (or becomes prohibitively expensive), but the reality may not be as bad as we think. The Transition Handbook shows how the inevitable and profound changes ahead could have a positive effect. Written by permaculture expert Rob Hopkins, he discusses the possibility of a rebirth of local communities, which will generate their own fuel, food and housing. These will encourage the development of local currencies, to keep money in the local area, and unleash a local 'skilling-up', so that people have more control over their lives. The growth in interest in the Transition model continues to be exponential. There are now more than 35 formal Transition Initiatives in the UK, including towns, cities, islands, villages and peninsulas, with more joining as the idea takes off. With little proactivity at government level, communities are taking matters into their own hands and acting locally. If your community has not yet become a Transition Initiative, this upbeat guide, filled with beautiful black and white photographs, offers you the tools to get started. The Transition Handbook is the perfect manual to guide communities, as they begin this 'energy descent' journey.
