Holes - Literature Kit Gr. 5-6 Angie McNaughton.2006-12-01 Search for buried treasure along with Stanley while solving an age-old mystery that will change lives forever. We combine comprehension and vocabulary, making it useful for both students

and educators. Make an assumption as to what crime Stanley committed prior to reading the novel. Record the social order of the boys at Camp Green Lake on a diagram of a ladder. Provide picture clues to help remember the meaning of the vocabulary words. Use clues to infer details about Hector's life. Create a handbook to help Stanley deal with bullying. Create character cards about one person from the novel, answering questions such as how the character acts, feels and likes. Aligned to your State Standards, additional crossword, word search, comprehension quiz and answer key are also included. About the Novel: Meet Stanley Yelnats, an unlikely hero who shows us that even the most ordinary individual is capable of extraordinary things. A unique and well-crafted story in which events from the past and present are woven together, ranging from whimsical and entertaining. Wrongly convicted of stealing running shoes, Stanley is given the option of attending Camp Green Lake, a "camp" where boys dig holes all day, every day. Stanley soon figures out that there is more to the hole-digging than building character as the Warden is looking for treasure. Stanley undergoes profound personal growth as he has to face challenges that would have seemed insurmountable.

communication and collaboration through reading texts that are value-centric, as well as activities, exercises and projects that develop life skills along with application and analytical thinking.

4. The series, which is meant for Classes 1 to 5, offers activity based courses for all subjects, i.e. Classes 1 & 2 (Term 1 to 3): English, Mathematics, Environmental Studies, General Knowledge Classes 3 to 5 (Term 1 to 3): English, Mathematics, Science, Social Studies, General Knowledge 5. All subjects are packaged in 3 term books for each class in such a way that the learner has-to carry only one textbook to school every day.

6. Each book contains the course content for each subject in a graded fashion. The child progresses from one book to the next having acquired all the concepts in all the subjects that he will require.

7. The books are child-friendly, with explanations given in age-appropriate language, along with ample examples, interesting activities and attractive illustrations.

8. Each subject is presented in a way that will appeal to learners and facilitators, with Activity Based Learning being the focus for all core subjects.

9. The exercises are designed to enhance skills of application and analysis while developing multiple intelligences.

A Framework for K-12 Science Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards. 2012-02-28 Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, *A Framework for K-12 Science Education* proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. *A Framework for K-12 Science Education* outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related

issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Learning Targets Connie M. Moss, Susan M.

Brookhart.2012-07-02 In Learning Targets, Connie M. Moss and Susan M. Brookhart contend that improving student learning and achievement happens in the immediacy of an individual lesson-- what they call today's lesson—or it doesn't happen at all. The key to making today's lesson meaningful? Learning targets. Written from students' point of view, a learning target describes a lesson-sized chunk of information and skills that students will come to know deeply. Each lesson's learning target connects to the next lesson's target, enabling students to master a coherent series of challenges that ultimately lead to important curricular standards. Drawing from the authors' extensive research and professional learning partnerships with classrooms, schools, and school districts, this practical book - Situates learning targets in a theory of action that students, teachers, principals, and central-office administrators can use to unify their efforts to raise student achievement and create a culture of evidence-based, results-oriented practice. - Provides strategies for designing learning targets that promote higher-order thinking and foster student goal setting, self-assessment, and self-regulation. - Explains how to design a strong performance of understanding, an activity that produces evidence of students' progress toward the learning target. - Shows how to use learning targets to guide summative assessment and grading. Learning Targets also includes reproducible planning forms, a classroom walk-through guide, a lesson-planning process guide, and guides to teacher and student self-assessment. What students are actually doing during today's lesson is both the source of and the yardstick for school improvement efforts. By applying the insights in this book to your own work, you can improve your teaching expertise and dramatically empower all students as stakeholders in their own learning.

designed to meet the growing need to infuse real-world learning into K-12 classrooms. This interdisciplinary, three-lesson module uses project- and problem-based learning to help students investigate how Earth science professionals gather information and develop theories about the formation of the Earth and the processes taking place since the proliferation of humans. Working in teams, students will work to identify, define and describe the attributes scientists use to delineate Earth's eras, periods, and epochs, in order to determine the appropriate boundary event to define the Anthropocene Epoch, and will develop a publication-ready textbook entry for an Earth science textbook. To support this goal, students will do the following:

- Identify, define, and describe attributes of eras, periods, and epochs which have marked geologic time in Earth's history.
- Evaluate various possible index layers and boundary events that mark the beginning of the Anthropocene Epoch to determine which is most appropriate when labeling the current epoch in Earth's history.
- Design and present a multimedia presentation to share with textbook publishers regarding information on the Anthropocene Epoch, to include in a secondary-level Earth science textbook.
- Create a publication-ready textbook entry describing the Anthropocene Epoch.

The STEM Road Map Curriculum Series is anchored in the Next Generation Science Standards, the Common Core State Standards, and the Framework for 21st Century Learning. In-depth and flexible, Formation of the Earth can be used as a whole unit or in part to meet the needs of districts, schools, and teachers who are charting a course toward an integrated STEM approach.
