Nondifferentiable Optimization V.F. Dem'yanov,L.V.

Vasil'ev.1985-12-12 Of recent coinage, the term nondifferentiable optimization (NDO) covers a spectrum of problems related to finding extremal values of nondifferentiable functions. Problems of minimizing nonsmooth functions arise in engineering applications as well as in mathematics proper. The Chebyshev approximation problem is an ample illustration of this. Without loss of generality, we shall consider only minimization problems. Among nonsmooth minimization problems, minimax problems and convex problems have been studied extensively ([31], [36], [57], [110], [120]). Interest in NDO has been constantly growing in

recent years (monographs: [30], [81], [127] and articles and papers: [14], [20], [87]-[89], [98], [130], [135], [140]-[142], [152], [153], [160], all dealing with various aspects of non smooth optimization). For solving an arbitrary minimization problem, it is necessary to: 1. Study properties of the objective function, in particular, its differentiability and directional differentiability. 2. Establish necessary (and, if possible, sufficient) conditions for a global or local minimum. 3. Find the direction of descent (steepest or, simply, feasible--in appropriate sense). 4. Construct methods of successive approximation. In this book, the minimization problems for nonsmooth functions of a finite number of variables are considered. Of fundamental importance are necessary conditions for an extremum (for example, [24], [45], [57], [73], [74], [103], [159], [163], [167], [168]).

The Sociology of Return Migration: A Bibliographic Essay

Frank Bovenkerk.2013-06-29 1. 1. Why this essay? It is customary for the author on return migration to complain about the lack of theoretical and empirical knowledge on his subject. Three recent general handbooks on the sociology of migration Jackson (1969), Jansen (1970) and Albrecht (1972), produce together no more than 10 sources on return migration. The by Mangalam (1968), although extensive migration bibliography giving no less than 2051 titles, still comes up with no more than 10 sources. It is true that not so many books and articles are devoted exclusively

to return migration: Appleyard (1962a, 1962b), Cerase (1967,1970), Committee ... (1967), Davison, B. (1968), Dietzel (1971), Elizur (1973), Feindt & Browning (1972), Form & Rivera (1958), Frohlich & Schade (1966), Hernandez-Alvarez (1967,1968), Kraak (1957a, 1957b, 1958), Kayser (1972), Myers & Masnick (1968), Migration News (1969), Mc Donald (1963), O.E. CD. (1967a, 1967b), Patterson. H.O. (1968), Richmond (1967a, 1967b, 1968), Richardson (1968), Saloutos (1956), Stark (1967b), Vanderkamp (1972), Vagts (1960) and Wilder-Okladek (1969). But this does not imply that no further research has been done and that therefore every new student of return migration had to begin from scratch. In numerous studies on emigration, migrant labour, immigration, integration and assimilation, room has been made for a chapter or a paragraph on those who returned or the migrant's return. I've found the demographical periodical *Population Index* relatively useful in tracing the subject.

Uranium Enrichment and Nuclear Weapon Proliferation Allan S.

Krass,Peter Boskma,Boelie Elzen,Wim A. Smit,Stockholm

International Peace Research Institute.2020-11-20 Originally

published in 1983, this book presents both the technical and political information necessary to evaluate the emerging threat to world security posed by recent advances in uranium enrichment technology. Uranium enrichment has played a relatively quiet but important role in the history of efforts by a number of nations to acquire nuclear weapons and by a number of others to prevent the proliferation of nuclear weapons. For many years the uranium enrichment industry was dominated by a single method, gaseous diffusion, which was technically complex, extremely capital-intensive, and highly inefficient in its use of energy. As long as this remained true, only the richest and most technically

advanced nations could afford to pursue the enrichment route to weapon acquisition. But during the 1970s this situation changed dramatically. Several new and far more accessible enrichment techniques were developed, stimulated largely by the anticipation of a rapidly growing demand for enrichment services by the world-wide nuclear power industry. This proliferation of new techniques, coupled with the subsequent contraction of the commercial market for enriched uranium, has created a situation in which uranium enrichment technology might well become the most important contributor to further nuclear weapon proliferation. Some of the issues addressed in this book are: A technical analysis of the most important enrichment techniques in a form that is relevant to analysis of proliferation risks; A detailed projection of the world demand for uranium enrichment services; A summary and critique of present institutional non-proliferation arrangements in the world enrichment industry, and An identification of the states most likely to pursue the enrichment route to acquisition of nuclear weapons.

In what conditions were these artists' materials and finished artworks produced and traded in early modern Europe and beyond? The lavishly illustrated contributions in this volume deal with the above questions and shed light on different trades, products, countries and timeframes by combining a large variety of methods and sources, including visual analyses, written sources, pigment analyses and archaeological excavations. The Philosophy of John Scottus Eriugena Dermot

Moran.2004-08-19 This work is a substantial contribution to the history of philosophy. Its subject, the ninth-century philosopher John Scottus Eriugena, developed a form of idealism that owed as much to the Greek Neoplatonic tradition as to the Latin fathers and anticipated the priority of the subject in its modern, most radical statement: German idealism. Moran has written the most comprehensive study yet of Eriugena's philosophy, tracing the sources of his thinking and analyzing his most important text, the *Periphyseon*. This volume will be of special interest to historians of mediaeval philosophy, history, and theology.

The Mathematical Writings of Évariste Galois Évariste Galois, Peter M. Neumann.2011 Before he died at the age of twenty, shot in a mysterious early-morning duel at the end of May 1832, Evariste Galois created mathematics that changed the direction of algebra. This book contains English translations of almost all the Galois material. The translations are presented alongside a new transcription of the original French and are enhanced by three levels of commentary. An introduction explains the context of Galois' work, the various publications in which it appears, and the vagaries of his manuscripts. Then there is a chapter in which the five mathematical articles published in his lifetime are reprinted. After that come the testamentary letter and the first memoir (in which Galois expounded on the ideas that led to Galois Theory), which are the most famous of the manuscripts. These are followed by the second memoir and other lesser known manuscripts. This book makes available to a wide mathematical and historical readership some of the most exciting mathematics of the first half of the nineteenth century, presented in its original form. The primary aim is to establish a text of what Galois wrote. The details of what he did, the proper evidence of his genius, deserve to be well understood and appreciated by mathematicians as well as historians of mathematics.

Doomi Golo—The Hidden Notebooks Boubacar Boris

Diop.2016-11-01 The first novel to be translated from Wolof to English, *Doomi Golo—The Hidden Notebooks* is a masterful work that conveys the story of Nguirane Faye and his attempts to communicate with his grandson before he dies. With a narrative structure that beautifully imitates the movements of a musical piece, Diop relates Faye's trauma of losing his only son, Assane Tall, which is compounded by his grandson Badou's migration to an unknown destination. While Faye feels certain that his grandson will return one day, he also is convinced that he will no longer be alive by then. Faye spends his days sitting under a mango tree in the courtyard of his home, reminiscing and observing his surroundings. He speaks to Badou through his seven notebooks, six of which are revealed to the reader, while the seventh, the "Book of Secrets," is highly confidential and reserved for Badou's eyes only. In the absence of letters from Badou, the notebooks form the only possible means of communication between the two, carrying within them tunes and repetitions that give this novel its unusual shape: loose and meandering on the one hand, coherent and tightly interwoven on the other. Translated by Vera Wülfing-Leckie and El Hadji Moustapha Diop.
