Museum Activism Robert R. Janes, Richard Sandell. 2019-01-10 Only a decade ago, the notion that museums, galleries and heritage organisations might engage in activist practice, with explicit intent to act upon inequalities, injustices and environmental crises, was met with scepticism and often derision. Seeking to purposefully bring about social change was viewed by many within and beyond the museum community as inappropriately political and antithetical to fundamental professional values. Today, although the idea remains controversial, the way we think about the roles and responsibilities of museums as knowledge based, social institutions is changing. Museum Activism examines the increasing significance of this activist trend in thinking and practice. At this crucial time in the evolution of museum thinking and practice, this ground-breaking volume brings together more than fifty contributors working across six continents to explore, analyse and critically reflect upon the museum's relationship to activism. Including contributions from practitioners, artists, activists and researchers, this wide-ranging examination of new and divergent expressions of the inherent power of museums as forces for good, and as activists in civil society, aims to encourage further experimentation and enrich the debate in this nascent and uncertain field of museum practice. Museum Activism elucidates the largely untapped potential for museums as key intellectual and civic resources to address inequalities, injustice and environmental challenges. This makes the book essential reading for scholars and students of museum and heritage studies, gallery studies, arts and heritage management, and politics. It will be a source of inspiration to museum practitioners and museum leaders around the globe.

Alkyl Polyglycosides Karlheinz Hill, Wolfgang von Rybinski, Gerhard Stoll. 2008-09-26 The first comprehensive survey on the uses of alkyl polyglycosides as renewable resources for the chemical industry. Their science as well as technological applications are described in this book competently and with a focus on industrial use.

Curatopia Philipp Schorch, Conal McCarthy. 2018-11-30 What is the future of curatorship? Is there a vision for an ideal model, a curatopia, whether in the form of a utopia or dystopia? Or is there a plurality of approaches, amounting to a curatorial heterotopia? This pioneering volume addresses these questions by considering the current state of curatorship. It reviews the different models and approaches operating in museums, galleries and cultural organisations around the world and discusses emerging concerns, challenges and opportunities. The collection explores the ways in which the mutual, asymmetrical relations underpinning global, scientific entanglements of the past can be transformed into more reciprocal, symmetrical forms of cross-cultural curatorship in the present, arguing that this is the most effective way for curatorial practice to remain meaningful. International in scope, the volume covers three regions: Europe, North America and the Pacific.

Online Distance Education Olaf Zawacki-Richter, Terry Anderson. 2014-06-01 Online Distance Education: Towards a Research Agenda offers a systematic overview of the major issues, trends, and areas of priority in online distance education research. In each chapter, an international expert or team of experts provides an overview of one timely issue in online distance education, summarizing major research on the topic, discussing theoretical insights that guide the research, posing questions and directions for future research, and discussing the implications for distance education practice as a whole. Intended as a primary reference and guide for distance educators, researchers, and policymakers, Online Distance Education addresses aspects of distance education practice that have often been marginalized, including issues of cost and economics, concerns surrounding social justice, cultural bias, the need for faculty professional development, and the management and growth of learner communities. At once soundly empirical and thoughtfully reflective, yet also forward-looking and open to new approaches to online and distance teaching, this text is a solid resource for researchers in a rapidly expanding discipline.

Future Forms and Design For Sustainable Cities Mike Jenks, Nicola Dempsey. 2006-08-11 Concentrating on the planning and design of cities, the three sections take a logical route through the discussion from the broad considerations at regional and city scale, to the larger city at high and lower densities through to design considerations on the smaller block scale. Key design issues such as access to facilities, access for sunlight, life cycle analyses, and the impact of communications on urban design are tackled, and in conclusion, the research is compared to large scale design examples that have been proposed and/or implemented over the past

decade to give a vision for the future that might be achievable.

Synthetic Oligosaccharides Pavol Kováč,American Chemical Society. Presents strategies for synthesis of complex oligosaccharides. Discusses the mechanisms of interaction between carbohydrates and biologically important proteins, such as enzymes, immunoglobulins, and receptor proteins. Fritz Haber Dietrich Stoltzenberg.2004 This long-awaited biography of Fritz Haber, now abridged by the author and translated into English, illuminates the life of one of the most gifted yet controversial figures of the 20th century. Haber was a pioneer in electrochemistry and thermodynamics and won the Nobel Prize for his synthesis of ammonia, a process essential for both fertilizer and explosives. His dedication to work spurred his efforts to increase support for scientific study in Germany; yet it also helped cause the breakdown of his two marriages. His ardent patriotism led him to develop chemical weapons for World War I and to try to extract gold from seawater, to help pay for Germany's huge war reparations. Yet Haber, a Jew by birth, was exiled from his homeland in 1933 by the Nazi party and died shortly after.

Biological Transformation Reimund Neugebauer.2020-09-11 The global population is expected to rise to 9.8 billion by the year 2050 - with everyone ultimately striving for prosperity. New methods must therefore be found to achieve more efficient production. Research to date shows that the biological inventory that has evolved: its products, processes, principles and tools, can spur modern technology. The development of technological innovations based on biological concepts, with the goal of particularly innovative and sustainable value creation, today is collectively known as biological transformation. It results in highly functional products with striking properties that can be both manufactured and utilized in a resource-saving way. In terms of taking responsibility of the good of all people, biological transformation is therefore a path that applied research will have to take. The Fraunhofer-Gesellschaft has recognized the developmental technology potential of biological transformation and sees it as its task not only to drive the relevant research forward, but also to promote public awareness of the topic.

A New German Idealism Adrian Johnston.2018-05-01 In 2012, philosopher and public intellectual Slavoj Žižek published what arguably is his magnum opus, the one-thousand-page tome *Less Than Nothing: Hegel and the Shadow of Dialectical Materialism*. A sizable sequel appeared in 2014, *Absolute Recoil: Towards a New Foundation of Dialectical Materialism*. In these two books, Žižek returns to the German idealist G. W. F. Hegel in order to forge a new materialism for the twenty-first century. Žižek's reinvention of Hegelian dialectics explores perennial and contemporary concerns: humanity's relations with nature, the place of human freedom, the limits of rationality, the roles of spirituality and religion, and the prospects for radical sociopolitical change. In *A New German Idealism*, Adrian Johnston offers a first-of-its-kind sustained critical response to *Less Than Nothing* and *Absolute Recoil*. Johnston, a leading authority on and interlocutor of Žižek, assesses the recent return to Hegel against the backdrop of Kantian and post-Kantian German idealism. He also presents alternate reconstructions of Hegel's positions that differ in important respects from Žižek's version of dialectical materialism. In particular, Johnston criticizes Žižek's deviations from the secular naturalism and Enlightenment optimism of his chosen sources of inspiration: not only Hegel, but Karl Marx and Sigmund Freud too. In response, Johnston develops what he calls transcendental materialism, an antireductive and leftist materialism capable of preserving and advancing the core legacies of the Hegelian, Marxian, and Freudian traditions central to Žižek.

Adhesives and Adhesive Tapes Gerhard Gierenz,Werner Karmann.2008-09-26 Adhesion is among the oldest technologies known to mankind, but the technology of adhesives began to boom with the developments in chemistry in the early 1900s. The last few years have seen tremendous progress in the performance of adhesives, allowing two pieces to be connected inseparably. Modern adhesives perform so well that more sophisticated joining methods, e.g. welding, can often be replaced by adhesion, meaning that adhesives have found new areas of application. This book allows readers to quickly gain an overview of the adhesives available and to select the best adhesive for each purpose.

Introduction to Food- and Airborne Fungi Robert A. Samson.2000 The increasing interest among microbiologists in fungal contaminants of food and air has created the need to study these micro-organisms in more detail. Although fungi, producing toxins or which cause health hazards, are ubiquitous and belong to the common contamination flora, their recognition is hampered by incomplete and often confusing literature. This book, published by the Centraalbureau voor Schimmelcultures in the Netherlands and now available from ASM Press, serves as a guide to food- and airborne fungi and contains keys and morphological descriptions of the most common species.

Making Museums Matter Stephen Weil.2012-01-11 In this volume of 29 essays, Weil's overarching concern is that museums be able to "earn their keep"—that they make themselves matter—in an environment of potentially shrinking resources. Also included in this collection are reflections on the special qualities of art museums, an investigation into the relationship of current copyright law to the visual arts, a detailed consideration of how the museums and legal system of the United States have coped with the problem of Nazi-era art, and a series of delightfully provocative training exercises for those anticipating entry into the museum field.

A Guide to the Systems of Provision Approach Kate Bayliss,Ben Fine.2021-01-04 Understanding consumption requires looking at the systems by which goods and services are provided - not just how they are produced but the historically evolved structures, power relations and cultures within which they are located. The Systems of Provision approach provides an interdisciplinary framework for unpacking these complex issues. This book provides a comprehensive account of the Systems of Provision approach, setting out core concepts and theoretical origins alongside numerous case studies. The book combines fresh understandings of everyday consumption using examples from food, housing, and water, with implications for society's major challenges, including inequality, climate change, and prospects for capitalism. Readers do not require prior knowledge across the subject matter covered but the text remains significant for accomplished researchers and policymakers, especially those interested in the messy real world realities underpinning who gets what, how, and why across public and private provision in global, national, and historical contexts.

Fractals, Quasicrystals, Chaos, Knots and Algebraic Quantum Mechanics Anton Amann,L. Cederbaum,Werner Gans.2012-12-06 At the end of the workshop on New Theoretical Concepts in Physical Chemistry,

one of the participants made an attempt to present a first impression of its achievements from his own personal standpoint. Apparently his views reflected a general feeling, so that the organizers thought they would be suitable as a presentation of the proceedings for future readers. That is the background from which this foreword was born. The scope of the workshop is a very broad one. There are contributions from mathematics, physics, crystallography, chemistry and biology; the problems are approached either by means of axiomatic and rigorous methods, or at an empirical phenomenological level. This same diversification can be found in the new basic concepts presented. Some arise from pure theoretical investigation in C*-algebra or in quantum probability theory; others from an analysis of very complex experimental data like nuclear energy levels, or processes on the frontier between classical and quantum physics; others again have their origin in the discovery of new ordered structures like the icosahedral crystal phases, or the knots of DNA molecules; others follow from the application of ideas like fractals or chaos to new fields like spectral theory or chemical reactions. It is to be expected that readers will have to face the same sort of difficulties as did the participants in understanding such diverse languages, in applying themselves to subjects possibly far from their own experience, and in grasping highly sophisticated new concepts.

Carbohydrate-based Vaccines René Roy.2008 This book is the first of its kind entirely dedicated to carbohydrate vaccines written by renowned scientists with expertise in carbohydrate chemistry and immunochemistry. It covers the synthesis of carbohydrate antigens related to bacteria and parasites such as: Hemophilus influenza, Streptococcus pneumoniae, Shigella flexneri, Candida albicans, Mycobacterium tuberculosis, and Chlamydia. The first three chapters are of wide interest as they cover fundamental concerns in new vaccine developments. The first one presents the immune system and how carbohydrate antigens are processed before protective antibodies are produced. It also illustrates antigen presentation in the context of major histocompatibility complexes (MHCs). The second chapter describes regulatory issues when carbohydrate vaccines are involved while the third one discusses several techniques used in conjugation chemistry and the implication of certain chemical linkages that may induce unexpected anti-linker antibodies. This section will be particularly appealing for those involved in drug-conjugate design, pro-drug developments, and drug vectorization. The book concludes with one chapter that illustrates the principle through which peptide antigens can functionally mimic carbohydrate epitopes, thus, unraveling the potential for peptide surrogates as replacement for complex carbohydrate structures. This book is unique in that it covers all aspects related to carbohydrate vaccines including the success story with the first semi-synthetic bacterial polysaccharide vaccine against Hemophilus influenza type b responsible for pneumonia and meningitis, liable for more than 600,000 infant deaths worldwide in developing countries. The book also presents regulatory issues and will thus be vital for government agencies approving candidate vaccines. It widely covers synthetic methodologies for the attachment of carbohydrate antigens to peptides and immunogenic protein carriers. Vaccines against bacterial antigens, cancer, and parasites are also discussed by worldwide experts in this field in details. No other book contains such a wide panel of different expertise. It will also be useful to students and researchers involved with the immunology of foreign antigens and how the underappreciated carbohydrate antigens are processed by the immune system.

National Human Development Report 2014 United Nations Publications.2015 Over the 15 years since the country's last National Human Development Report (NHDR) was published Ethiopia has undergone significant economic and social changes and has recorded some of the highest growth rates in the world-over 10 per cent in some years. However, Ethiopia's Human Development Index (HDI) and its relative ranking have not moved appreciably during the past decade. Even though Ethiopia is one of the 10 countries globally that has attained the largest absolute gains in its HDI over the last several years, it still ranks 173rd out of 186 countries in the latest UNDP Human Development Report. It is this development challenge that underlines the fact that the preparation of the NHDR is so opportune now and why the focus of the report on inclusive growth for sustainable human development is so apposite. In 1998, when the last NHDR was written, the development challenges facing the country were considerably different.

Whiplash Injury Andreas Otte.2012-03-19 In the past two decades much has been published on whiplash injury, yet both the confusion regarding the condition and the medicolegal discussion surrounding it have increased. In this scenario, a guide to recent and current international research in the field is more necessary than ever. Especially functional imaging methods - such as single-photon emission tomography, positron emission tomography, functional MRI, and hybrid techniques - have demonstrated a variety of significant brain alterations. This book accordingly offers a critical approach to the challenging interpretation of the new research data obtained using functional neuroimaging in whiplash injury. It covers all aspects, including the imaging tools themselves and the different methods of image analysis. Whiplash Injury: New Methods of Functional Neuroimaging will hopefully help patients, their relatives and friends, physicians, and others to understand this condition as a disease.

Bioeconomy for Beginners Joachim Pietzsch.2020-03-06 This book provides an interdisciplinary and comprehensible introduction to bioeconomy. It thus provides basic knowledge for understanding a transformation process that will shape the 21st century and requires the integration of many disciplines and industries that have had little to do with each other up to now. We are talking about the gradual and necessary transition from the age of fossil fuels, which began around 200 years ago, to a global economy based on renewable raw materials (and renewable energies). The success of this transition is key to coping with the challenge of climate change. This book conceives the realization of bioeconomy as a threefold task - a scientific, an economic and an ecological one. · Where does the biomass come from that we need primarily for feeding the growing world population but also for future energy and material use? How can it be processed in biorefineries and what role does biotechnology play in this regard? · Which aspects of innovation economics need to be considered, which economic aspects of value creation, competitiveness and customer acceptance are important? · What conditions must a bioeconomy fulfil in order to enable a sustainable development of life on earth? May it be regarded as a key to further economic growth or shouldn't it rather orient itself towards the ideal of sufficiency? By dealing with these questions from the not necessarily consistent perspectives of proven experts, this book provides an interdisciplinary overview of a dynamic field of research and practice that raises more questions than answers and thus may nurture the motivation of many more people to seriously engage for the realization of a bioeconomy.

Energie Bernd Diekmann,Eberhard Rosenthal.2013-11-01 In dem vorliegenden Band wird naturwissenschaftlich-physikalische Hintergrundinformation zum Thema Energie bereitgestellt, um dem Leser objektive Bewertungskriterien für die global hochaktuelle Diskussion der Zukunft unserer Energieversorgung an die Hand zu geben. Insbesondere ist es ein zentrales Anliegen, dem Leser eine Bilanzierung aller Quellen hinsichtlich der Einflussnahme ihrer Gewinnung und Verwendung auf die Umwelt zu erstellen und das jeweilige Risiko zueinander in Relation zu setzen. Nach Festlegung des Begriffes Energie und ihrer Erscheinungsformen werden globale Randbedingungen des Umgangs mit Energie aufgezeigt. Diese Randbedingungen werden sodann für Deutschland als typischem Industrieland enger eingegrenzt. Die Palette infrage kommender Quellen, fossile, erneuerbare und nukleare, wird sodann im Detail vorgestellt. Ergiebigkeit der Ressourcen sowie sonstige Möglichkeiten und Grenzen des Einsatzes werden diskutiert; alle Energiequellen werden sodann nach Definition eines energetischen Erntefaktors miteinander verglichen. Die Speicher- und Transportmöglichkeiten und - hiermit eng verbunden - die Handlungsspielräume rationalen Umgangs mit den diversen Formen der Energie bilden einen weiteren Schwerpunkt. Der an naturwissenschaftlicher Hintergrundinformation interessierte Leser findet in einem gesonderten Kapitel eine detaillierte Präsentation ausgewählter Techniken.

Hazardous Chemicals Ernst Homburg,Elisabeth Vaupel.2019-08-01 Although poisonous substances have been a hazard for the whole of human history, it is only with the development and large-scale production of new chemical substances over the last two centuries that toxic, manmade pollutants have become such a varied and widespread danger. Covering a host of both notorious and little-known chemicals, the chapters in this

collection investigate the emergence of specific toxic, pathogenic, carcinogenic, and ecologically harmful chemicals as well as the scientific, cultural and legislative responses they have prompted. Each study situates chemical hazards in a long-term and transnational framework and demonstrates the importance of considering both the natural and the social contexts in which their histories have unfolded.

Life Cycle Inventory Analysis Andreas Citroth, Rickard Arvidsson. 2022-09-01 Life Cycle Inventory (LCI) Analysis is the second phase in the Life Cycle Assessment (LCA) framework. Since the first attempts to formalize life cycle assessment in the early 1970, life cycle inventory analysis has been a central part. Chapter 1 "Introduction to Life Cycle Inventory Analysis" discusses the history of inventory analysis from the 1970s through SETAC and the ISO standard. In Chapter 2 "Principles of Life Cycle Inventory Modeling", the general principles of setting up an LCI model and LCI analysis are described by introducing the core LCI model and extensions that allow addressing reality better. Chapter 3 "Development of Unit Process Datasets" shows that developing unit processes of high quality and transparency is not a trivial task, but is crucial for high-quality LCA studies. Chapter 4 "Multi-functionality in Life Cycle Inventory Analysis: Approaches and Solutions" describes how multi-functional processes can be identified. In Chapter 5 "Data Quality in Life Cycle Inventories", the quality of data gathered and used in LCI analysis is discussed. State-of-the-art indicators to assess data quality in LCA are described and the fitness for purpose concept is introduced. Chapter 6 "Life Cycle Inventory Data and Databases" follows up on the topic of LCI data and provides a state-of-the-art description of LCI databases. It describes differences between foreground and background data, recommendations for starting a database, data exchange and quality assurance concepts for databases, as well as the scientific basis of LCI databases. Chapter 7 "Algorithms of Life Cycle Inventory Analysis" provides the mathematical models underpinning the LCI. Since Heijungs and Suh (2002), this is the first time that this aspect of LCA has been fundamentally presented. In Chapter 8 "Inventory Indicators in Life Cycle Assessment", the use of LCI data to create aggregated environmental and resource indicators is described. Such indicators include the cumulative energy demand and various water use indicators. Chapter 9 "The Link Between Life Cycle Inventory Analysis and Life Cycle Impact Assessment" uses four examples to discuss the link between LCI analysis and LCIA. A clear and relevant link between these phases is crucial.
